**PRO-POOR GOVERNANCE REFORM INITIATIVES IN
MADHYA PRADESH, INDIA, 1993-2010: AN INTRODUCTION**

Manoj Srivastava*

Jamsetji Tata Fellow in Pro-Poor Governance,
Department of International Development, LSE

This working paper is one among a set of five companion working papers which arise from research on the dynamics of the pro-poor governance reforms that were undertaken in Madhya Pradesh (MP), India, during the years 1993-2003, under the leadership of the then Chief Minister, Shri Digvijay Singh.

A number of significant initiatives were undertaken in Madhya Pradesh (MP) under Digvijay Singh's leadership. Collectively, they sought to secure empowerment, participation and improved well-being for common citizens, especially for poor and relatively powerless men and women living in rural areas. These initiatives included: decentralization through the establishing of *Panchayati Raj Institutions* (PRIs), and the devolution of considerable powers and resources to these institutions to manage important rural developmental programmes; universal access to primary and elementary education through the Education Guarantee Scheme (EGS); a Participatory Watershed Development Programme; a District Poverty Initiative Programme (DPIP); *Rogi Kalyan Samiti* and *Jan Swasthya Rakshak* - participatory governance systems for improving hospital services and health delivery system; Participatory (Joint) Forest

* I am grateful to Professor Stuart Corbridge, Pro-Director, LSE for his invaluable encouragement, guidance and incisive critical comments, above all his stimulating intellectual thoughts and contributions, without which this research would have not been possible. I also wish to thank following scholars and friends for helpful comments and discussions: Jo Beall, Teddy Brett, Jean-Paul Faguet, James Putzel, Ken Shadlen and Robert Wade (all from LSE); Abhijeet Banerjee, Bish Sanayal and Judith Tandler (all from MIT); Ron Herring and Normal Uphoff (both from Cornell, USA); Patrick Heller and Ashutosh Varshney (both from Brown University, USA); and John Harriss (SFU, Canada), Walter Hauser (Virginia, USA), Sanjay Kumar (IFS, India), Emma Mawdsley (Cambridge, UK), Glyn Williams (Sheffield, UK) and Rene Veron (Lausanne, Switzerland). I am indebted to hundreds of villagers and numerous PRI members, politicians, government officials and activists from MP for their valuable time and for the insights that have gone into shaping my research. I thank Sunil, my computer assistant, for his hard work in undertaking the data entry and other computer related works, and Sue Redgrave for her copy-editing work. My thanks are also due to the team of field investigators for assisting me in conducting the field research. However, all errors and omissions are my responsibility. My grateful thanks are also due to the Jamsetji Tata Trust for its support of the Tata Institute of Social Sciences (TISS) and LSE research collaboration, under the auspices of which this research has been carried out.

Management (JFM); a Right to Information Act; and Citizens Charters. Through these policies and programmes, multiple institutional spaces were created in Madhya Pradesh with the stated purpose of channeling action by and on behalf of designated (mainly rural) communities. The overall aim was to bring a ‘quiet revolution’ to MP whereby successful development work would expand popular participation and (thus) greatly more responsive government.

What did this simple mantra of *popular and responsive government* give rise to? Nothing less than a revolution in participatory governance if one accepts the key claims made by the Government of Madhya Pradesh: about 3.44 lakh [one lakh = 100,000] elected representatives of *panchayats*, of whom 1.16 lakh were women, most of whom took charge of village governance and development (1999-2004 *panchayat* elections); 50,000 members of watershed committees; 1.5 million members of *Tendupatta* (tobacco leaf) plucker societies and more than 4.8 million members of joint forest management committees have been managing their natural resources; about 32,000 *Gurujis* (para teachers) selected by the community are teaching in community schools under the Education Guarantee Scheme. The Government has further asserted that participatory governance has not only deepened democracy in MP, but has paid huge dividends by ensuring improved outcomes. For instance, about 26,600 EGS Schools were established from 1997-2002, when it took MP 50 years to establish about 56,000 primary government schools, and the greater accountability of *Gurujis* to local people (since they appointed and controlled them) supposedly led to a significant increase in literacy levels in MP during the decade of 1991-2001: it rose to 64.11% (national average 65.38%). Female literacy growth of 20.94% during that decade was the best in India. The EGS innovation earned MP a “Commonwealth Innovation” award.

Similarly, the participatory watershed development programme (Rajiv Gandhi Watershed Mission) started in 1994 with a target of treating 1.2 million hectares, but quickly expanded to cover 3.43 million hectares by 2001 to become India’s largest such programme. Different water harvesting and soil conservation activities were completed across about 1.4 million hectares by 2001 with an expenditure of about Rs. 6.9 billion. They covered about 8,000 villages with the apparently active involvement of more than 5,000 watershed committees, about 44,000 user committees, 14,000 self-help-groups

and some 8,000 women thrift and credit groups. This resulted, it has been suggested, in an increase in Kharif area cultivation of 21% and of productivity by 37%. It also led to an increase in the area under irrigation by 59%, a decrease in wastelands by 34%, and improvement in ground water table levels in more than 3,000 villages.

Impressive as these initiatives and their outcomes apparently were, they were quite extraordinary as well in terms of supposed motivation. Outcome improvements were said to be based on a vision of and strategy for pro-poor governance reform: empowering the common and poor people to take charge of development programmes for their own benefit. The MP model became widely lauded within and outside India. To many academics, however, the supposed success of MP in the 1990s and early 2000s seemed unlikely, not to say counter-intuitive. This is so because, first, the state of MP hardly inspired confidence in its developmental potential. It was widely regarded when Digvijay Singh came to power as one of India's BIMARU (poorest, under-performing, even failing) States. It was characterised by low economic growth, abject poverty, low levels of human development and high levels of gender disparity. Second, politics in MP had long been marked by elite (forward caste) control of the State's main socio-political institutions. This pattern of control essentially reflected a feudal power structure and the local prevalence of vertically organised systems of clientelistic politics. The formation of MP in 1956 from 72 erstwhile Princely States deeply reinforced this elite-dominated scenario. In such an institutional context, pro-poor reforms which are potentially threatening to the elites who colonize and control state power are (or should be) highly unlikely to be undertaken by the state itself. And, thirdly, large-scale organized movements and protests by the downtrodden for educational reforms or economic betterment were noticeable in MP prior to 1993 mainly by their absence. The other backward Castes (OBCs) in MP-- unlike their counterparts in UP and Bihar, where they had gradually emerged politically to challenge the traditional order in the 1970s and 1980s - are demographically too fragmented, and politically too easily co-opted, to emerge as a robust channel for articulating the aspirations of locally depressed (or oppressed) people.

We know, however, that a wide array of 'pro-poor' initiatives was mainstreamed across MP by Digvijay Singh and some of his colleagues. More so, indeed, than in either Uttar

Pradesh or Bihar. Here then are our central puzzles. This research has attempted to explore: (i) how and why the State of MP acquired its initial capacity to envision and further a pro-poor governance reform agenda (henceforth 'agenda') in the teeth of evident political risks; (ii) under what institutional premises and logics different policies and programmes were structured for realising the agenda on the ground. How effectively (or not) did such strategies work? If they proved effective, did that result from the successful unfolding of those premises and logics, or were other unanticipated factors responsible? And if so, why? If the strategies failed or performed poorly did the premises and logic prove inadequate or faulty, or did they turn ineffective in face of countervailing forces of ground realities?; and (iii) How if at all can the answers to these questions be causally inter-connect to understand the outcomes of reforms on the ground? What fresh insights do the MP reform experiments and experiences offer to both the academic and the policy worlds for advancing the debates on and practices of pro-poor governance?

To answer these questions we studied the four most important elements of MP's agenda for pro-poor reforms: (i) decentralization through PRIs and the implementation of a major anti-poverty programme, the *Jawahar Rojgar Yozna (JRY)*; (ii) decentralization from the district to the village level with reference to the first national level 'rights-based' Employment Assurance Scheme (EAS); (iii) community driven development (CDD), as exemplified by the Education Guarantee (EGS); and (iv) state-society partnership, or co-production, with reference mainly to the watershed development programme.

Three districts were selected for study, with each one representing important socio-political regions in MP: Rewa in the Vindhya region with its highly feudal characteristics; Mandla from the Mahakaushal region, which is dominated by tribal communities; and Neemuch from the Malwa region, peculiar for the dominance of its backward castes and for high levels of peasant entrepreneurship. In each district, one Block, and within that Block a total of five Panchayats and 13 villages – all told comprising 2,181 households or a population of 10,076 villagers - were sites of intensive qualitative investigations (A further three villages were also studied partially in a sixth Panchayat). A semi-structured questionnaire comprising of 182 questions spread over

six parts was administered to a randomly generated sample of 218 households with a pro-poor bias in their composition (about 80% poor and 20% non-poor). The questionnaire placed special emphasis on eliciting people's voices, views, reasoning and overall understanding of the issues under investigation. About 70% of the questions were qualitative in nature, which was in line with the deep ethnographic stance of the research. 7,924 responses (in Hindi) to qualitative questions were closely studied to identify answers that were similar in content and essence despite differences in their wording. Consequently, 1,153 common answers from these were formulated in English, which helped finally to prepare 158 tables and 113 graphs to present a coherent ethnographic story of different issues studied under the research based on common villagers' accounts.

About 140 deep interviews were conducted with key respondents/insiders. Included, for example, were: the Chief Minister of MP, Ministers, opposition leaders, MLAs, principal secretaries and directors, social activists, media persons, and academicians (at the state level); district collectors, other important district level functionaries, district panchayat presidents, vice presidents, and elected members, and district level political personalities from different parties (at district level); Presidents and members of Block level PRIs, BDOs, other supervisory staff (at block level); and sarpanchs and ex-sarpanchs, panchayat secretaries, presidents and members of Parents-Teachers Associations (PTAs) and of Watershed Committees, teachers and para teachers, retired government personnel, other knowledgeable villagers (at panchayat and village levels). Additional insights were gained by observations made during participation in, for example: assembly sessions, district government meetings, district panchayat meetings, public meetings addressed by the Chief Minister, election campaign rallies, workshops, offices of government officers and even the homes of Ministers. These were critical to enriching the ethnographic understanding of the dynamics of the agenda.

Further, wherever relevant and feasible, this qualitative study was backed up by District and Block level quantitative analyses both to give the ethnographic findings a wider backdrop and to assess whether findings were unique to the villages studied and/or reflected a broader pattern. Consider, for example, our work on the EAS. First, a database of 1,435 projects executed in 1,487 panchayats in all 21 Blocks of the three

research Districts was prepared from the original handwritten documents collected from the district offices – this ran to 512 pages. Each panchayat's total population, and those of SC and ST communities, were then compiled for all 21 blocks from the Government of India's Ministry of Panchayat (MoP) database. Data was also collected on nine parameters of all households of 1,487 panchayats, including for example: Means of Livelihood; House type; Landholding; Income level; Migration, and a few others were compiled in 3,131 pages from the BPL database of MP. After cutting out some less relevant information from these datasets a comprehensive database for the analysis of patterns in EAS resource distribution across the three districts was prepared. This contained information on 20 key dimensions, including: district, block, panchayat names, total EAS fund panchayat-wise, population and other 9 parameters' information obtained in the aforesaid manner, as also information on *percentage deviation analysis* on additional 63 items, which led the database to cover 125,122 data-points and run into 507 pages of excel sheets. The *percentage deviation analysis* is reported in detail in WP 2, with revealing findings about how EAS resources were disproportionately distributed, privileging a few panchayat and blocks and unjustly depriving others.

Further Methodological Discussion will be provided in Working Paper 6. Working Papers 1 to 4 report on how well (or not) the agenda of reform worked in the areas of the JRY, EAS, EGS and Watershed Development. Working Paper 5 pulls the findings of WPs 1-4 together in an integrated way and discusses the collective implications of the research project –intensive fieldwork for which and data analysis were mainly carried out in 2009 and 2010, although some exploratory work was done earlier. The work has relevance for contemporary debates and experiments on decentralization, participation, CDD and state-society synergy through coproduction. All of these are widely viewed as key to seeking institutional change for securing more pro-poor, accountable and responsive governance institutions. This body of research avoids the pitfall of assuming the existence of participatory dynamics in such experiments and subjects them to an in-depth and penetrating empirical probe for confirming (or not) their causal connections to governance reforms.

Working Paper 119

DO THE POOR EFFECTIVELY UTILISE A “RIGHTS-BASED PROGRAMME” WITH THE SUPPORT OF MULTI-LAYERED DECENTRALISATION?

The Dynamics of EAS in Madhya Pradesh, India with a Comparative View from Bihar

1. The Paradoxical Cycle of Success and Failure of Development Programmes

Hirschman’s ‘bias for hope’¹ argument had long back drawn attention to an important though often overlooked fact that successful and failed developmental programmes are not mutually exclusive cases. A programme can both have failures and successes, thus it is critical not to lose sight of the ‘islands’ of successes within the ‘oceans’ of failed, or so understood, programmes. Lipton remarkably recalls this wisdom while recounting the peculiarities of the Indian developmental saga:

Perhaps most intriguingly, there is a pattern, clearest in India, in which successful poverty-reducing agencies decline and are replaced by new successes, which then decline in turn. From the days of Community Development in the 1950s, these have ranged from to IRDP and the employment-oriented JRY today. Most of these big programmes started well. However, each gradually succumbs to rent-seeking by non-poor clients or administrators, or to rivalry from line ministries. Some programmes live on in attenuated form, but usually they are replaced by new schemes, also *initially* successful. *New schemes attract public scrutiny; old schemes accumulate clients.*²

The irony implicit in Lipton’s remark is best exemplified by the case of the Employment Assurance Programme (EAS) discussed in this paper. Recall that the JRY started in 1989 with a great élan (WP 1). However, a mere four years later the then Prime Minister of India, P.V. Narasimha Rao, announced the launch of the EAS in 1993 as the first “rights-based” programme, since it offered, in essence (though not on a statutory basis), a guarantee to every two members of a rural family of 100 days employment during the lean seasons on their demand. By that time euphoria about JRY’s initial success had

¹Hirschman (1971).

²Lipton (1996: 2; emphasis added).

waned and, another programme, as Lipton would argue, had to come in to wax (though again only for sometime, as is shown below), which came in the shape of the EAS.³

The unique provision under the EAS of the State's unequivocal and irrevocable 'assurance' to the poor of their right to demand 100 days employment afforded it the legitimacy, at least in initial years, to be viewed as an even more empowering programme than the JRY. Though JRY did devolve the funds to villages and brought them under people's control for the first time in India, it still was premised on the discourse of the "need-based" development: people were provided with the opportunity to utilize JRY's fixed resources in accordance with their felt-needs. However, with the EAS the Federal Government in India for the first time introduced the discourse of the "rights-based development, since this envisaged that claims on the state for the provision of public goods (employment) would be made by citizens in terms of "rights" rather than "needs".⁴ Its bold implication was that the Government could not limit the EAS on the plea of resource-constraint. Given the rights feature in the programme, the State was obliged to provide enough resources to honour people's demand for employment. Understandably, therefore, Narasimha Rao and his team claimed EAS as

³The JRY, though, was not entirely abandoned but was left to continue with various changes perhaps as attempts, though unsuccessful, to salvage it. For example, JRY was modified in 1993 when the EAS was launched through introducing greater focus on backward districts with additional funds. Funds were also earmarked for taking up special and innovative projects. In 1999, JRY was again restructured and named the *Jawahar Gram Samridhi Yojana*, which also reversed its objectives: the creation of village infrastructure became the primary and the generation of supplementary employment for the rural poor the secondary objectives. The formulae for distribution of resources also changed, to 65:15:20, i.e., 65% to village panchayats, 15% to block panchayats and 20% to district panchayats. Finally it merged in 2001 with another umbrella programme the *Sampoorna Grameen Rojgar Yojna* (SGRY: Total Rural Employment Programme) (CAG, 2000: 4; Iyer, 1994: 2065).

⁴This is indeed the distinguishing feature of the "rights-based approach" to developmental programmes. An important aspect of this "rise of rights" discourse in development is an emphasis on socio-economic rights in addition to civil and political ones. Several implications follow from this shift toward rights: an emphasis on agency on the part of the poor (both in terms of claiming rights and the duty of civic participation) and the highlighting of issues of power and political struggles through which rights are gained (Joshi, 2010). For accounts that emphasize the importance of the language of rights for development and also argue for their legal underpinning to enable and nurture political actions around them, see Moser and Norton (2001); Musyoki and Nyamu-Musembi (2005); Eyben (2003); Rodriguez-Garavito (2005). For views that are critical of the role of law in advancing rights-based approaches, see Hunt (1993); de Souza Santos (2002); McCann (1994).

a pioneering programme⁵ that aimed at actualising the grand vision of life with dignity and the right to work and livelihood enshrined, *inter alia*, in the Article 21 of the Constitution of India.

Though incidental to the discussion here, it is nonetheless worthwhile to briefly mention that the intriguing circularity of success and failure of Indian developmental programmes took another full turn when the Congress-led UPA government launched the so-called revolutionary, paradigm-changing, landmark National Rural Employment Guarantee Scheme (NREGS) in 2005. In fact, the only difference between the EAS and the NREGS is that the guarantee of 100 days employment has a *statutory basis* in the latter, whereas in the former it was offered as an *assurance*. But, in celebrating the NREGS Bill and defining the moment of its coming as momentous, the EAS as its forerunner was only mentioned in passing. Related records are revealing in this regard. While intervening in the debate on 24 August 2005 in the Upper House on the National Rural Employment Guarantee Bill, the present Prime Minister Dr. Manmohan Singh was at pains to describe the NREGS in all possible laudatory terms: “Mr. Chairman, Sir, this Bill ... is ... a ***new beginning***, a landmark in the *regime of rights enjoyed by our people*, ... Sir, it is a *path-breaking* legislation... .”⁶ Interestingly, a decade earlier when the EAS had been initiated, the same Dr. Singh, who was then the Finance Minister, was no less enthusiastic in informing the Parliament while presenting the 1994-95 budget on 28 February 1994 that the outlay of the EAS was doubled to Rs.1,200 crore⁷ as compared to the 1993-94 outlay of Rs.600 crore.⁸ Then the EAS was in its heydays, thus just in one year its resources were doubled to ensure that the State did not have to renege on its promise of 100 days employment. But in 2005, when the EAS had been relegated to the pages of the history, Dr. Singh had only these words for the EAS that he had once supported with no less enthusiasm: “Similar employment assurance schemes

⁵ Though the EAS was the first national programme that ventured to implement some of the ideas of a rights-based programme, however, as discussed in section 2 the Maharashtra Employment Guarantee Scheme (MEGS) was its precursor, which had additionally through an Act, rendered the guarantee legally enforceable. Nonetheless, MEGS was a state programme confined only to the state of Maharashtra.

⁶ *Rajya Sabha*, 2005. Emphasis added. See also *Outlook India*, 2005.

⁷ Rs. 12,000 million, or Rs. 12 billion.

⁸ GoI, MoF (1994:10).

were devised when Shri Narasimha Rao was the Prime Minister and I was the Finance Minister. There is, however, a cardinal difference. For the first time, we are now recognising the right to work as a fundamental legal right.”⁹ Clearly, not only did he downplay the EAS as a right-based programme in this speech, a position that is the reverse of what he thought a decade earlier, but also argued that the NREGS’s guarantee (of 100 days employment) being a legal one is cardinally different from the EAS’s assurance (of 100 days employment) given in 1993. This could amazingly imply that even a sovereign State’s public promulgation of an assurance to its citizens may not be infallible, and that unless it binds itself by a law its credibility is doubtful! Note that what is being talked about here is not about politicians’ but a sovereign State’s promise to its citizens.

Today when the NREGS is chanting the mantra of success in India, the Employment Assurance Scheme is hardly talked about¹⁰, just as in 1993 the JRY had almost lost attention of the people when the EAS was waxing, and again just as the NREP and RLEGP, the success stories of the 1980s, had been relegated to the oblivion by 1993 with the coming of the JRY. However, it seems unlikely that even the NREGS, despite its greater claim of success than any other programme in the past, would break the circularity in the story, since it has also started, *a la* Lipton, accumulating clients¹¹.

⁹ Rajya Sabha, *op. cit.*

¹⁰ One exception is Venugopal, who was the Secretary to the Prime Minister Narsimha Rao in 1993 and one of the architects of the EAS. Amidst the nationwide excitement generated by the NREGS, he dared to suggest that the EAS was more progressive than the NREGS:

“The NREGA 2005 also represents regression in regard to workers’ rights and welfare compared to the past. For the sake of a proper perspective, let us look at the Employment Assurance Scheme (EAS) that Prime Minister Narasimha Rao framed for the country in 1993 ... It assured employment for two adults in the household for 100 days each. Admittedly, the word guarantee was not used nor was that concept even conceded in the EAS. However, the EAS spelt out what an employment programme should be like for the poor. Yet, 12 years after that scheme which was a harbinger, the poor get a scheme in 2005 that actually reduces their entitlement by half!” (Vengopal, 2007: 140)

¹¹Critical reviews of the NREGS pointing out huge corruption, low utilization of funds, and the poor level of employment generation in its implementation in many parts of the country are now increasingly appearing in both academic literature and media reports. For example, see Dreze and Khera (2008a;

Consequently, it can be safely conjectured that a new programme may come in to replace it, possibly sooner than later.

2. Exception to the Cycle: What does the Maharashtra Guarantee Programme tell?

Joshi and Moore, however, suggest that one programme in India, the Employment Guarantee Scheme of Maharashtra (MEGS), wholly conceived, funded and implemented by a state government, has proved itself a striking exception to Lipton's pattern.¹² Although their counter point to Lipton's view on the 'pattern' differs slightly (since Lipton emphasized more on possibilities of success coexisting with failures, even within programmes often branded as failed), the more significant issue they raise, and which merits attention, is the MEGS's rights-based framework which is of immense relevance for understanding the EAS (also the ongoing NREGS). The evolution of both these latter national programmes was deeply inspired by the MEGS in multiple ways. Additionally, since "much of our current knowledge about such policies [guarantee programmes] stems from past research on MEGS,"¹³ its brief discussion is in order before the story of EAS is presented in some detail.

Having been formally initiated in 1977 through an EGS Act, it still continues in Maharashtra well over 30 years after its inception.¹⁴ MEGS is a comprehensive rights-based wage employment programme having: (a) the right to demand 100 days employment; (b) the rights are legally enforceable; in the case of failure, the state is

2008b); Dreze and Oldiges (2009); Rao (2007); Siddhartha (2008); Aakela and Kidambi (2007); Long (2005); Murgai and Ravallion (2005a, 2005b); Olson (2005); Shah (2006); Sastry (2006); Vnaik (2009).

¹²Moore and Joshi (2000: 42).

¹³ Ravallion (2005: 3450).

¹⁴Besides old literature on this well researched programme, the recent studies by the Centre for the Future States at the IDS, Sussex and Puna University have added fresh perspectives on the rights-based and mobilisational dimensions of the MEGS. For example, see: Echeverri-Gent (1988); Echeverri-Gent (1993); Herring and Edwards (1983); Dev (1995); Dev (1996); Joshi and Moore (2000); Moore and Jadhav (2006); Joseph (2006); Patel (2006); Jadhav (2006); Lieberman (1985); Abraham (1980); Acharya (1990); Dandekar and Sathe (1980); Bagchee (1984); Jenkins (1995); MHJ (1980); MHJ (1982); Bhende et al. (1992); Gahia (1996); Hirway and Terhal (1994); Mathur and Bhattacharya (1975); Omvedt (1975); Osmani (1991); Ravallion (1999); Ravallion (2001); Ravallion and Dutt (1995); Sheth (1984); Subramaniam (1975).

obliged to pay compensation (unemployment allowance); (c) in principle, at least, funds are always available for projects that are approved on technical grounds and meet employment needs;¹⁵ (d) works offering employment in response to demand to be situated within a reasonable distance of the labourer's residence (5 km.); (e) statutory minimum wages; and (f) gender parity in both access to employment and wage rates for similar types of works. Most of these essential features have gone into shaping both EAS and NREGS.

What is the most critical learning that the MEGS's experiences bring to bear on the similar right-based approach followed in the subsequent programmes of EAS and NREGS?¹⁶:

MEGS's roots were located in the pioneering work of a group of progressive politicians and social activists, most notably V. S. Page, a long time Congress politician in Maharashtra. His small pilot project to mobilize underemployed labour on a large-scale to drought-proof the local agricultural environment eventually led to the Maharashtra State Congress Party committing itself to the general principle of introducing such a programme, with an employment guarantee. The programme thus was known also as the *Page Scheme*.

Studies also show that, Page's inspiration notwithstanding, MEGS was shaped by the anti-state movements that emerged in Maharashtra because of the 1970-73 droughts. They had affected almost 80 percent of villages in the state, and about 15 to 30 million people out of a population of 50 million at that time, and thus had led to a major crisis that the state had to deal with.¹⁷ In this context, concerned citizens and intellectuals came together with activist groups and opposition parties to form

¹⁵The MEGS is funded outside normal budgetary processes. A special set of dedicated taxes, along with an equal contribution from normal state government revenues, are paid into an EGS Fund. The bundle of new cesses and taxes had components such as: (1) Taxes on Professions, Callings and Employment, (2) Additional Tax on Motor Vehicles, (3) Additional Tax on Sales Tax, (4) Surcharge on Non-residential Urban Lands and Buildings. Noting that these resulted in most of the taxes being realized from urban salaried workers and consumers generally, Herring termed it peasants' revenge on 'Urban Bias' (Herring, 1983: 584-586). See also Moore and Jadhav (2005).

¹⁶This synoptic account is based on the readings of the select literature on MEGS already referred to in f.n. 13. The following among them especially go into the issues of activism and mobilisation of the poor around the MEGS, but also broadly deal with its political economy questions as well: Echeverri-Gent (1988); Echeverri-Gent (1993); Herring and Edwards (1983); Dev (1995); Joshi and Moore (2000); Moore and Jadhav (2006); Joseph (2006); Patel (2006); Jadhav (2006).

¹⁷Ladejinsky (1973)

the *Dushkal Nivaran aur Nirmoolan Samiti* (Drought Relief and Eradication Committee) in 1971, to mobilize the people of the state against the drought and to demand the state government bring in a drought relief scheme. The Committee brought together politically disparate organizations, such as *Yuvak Kranti Dal*, or *Yukrand* (Revolutionary Youth Group)¹⁸, and independent left-wing political parties such as the *Lal Nishan Party* (Red Flag Party: LNP)¹⁹ to evolve a common agenda to seek initiation of an employment generation programme on demand, similar to the Page scheme. Parties such as the LNP, which combined Marxism with a distinctive Maharashtrian cultural orientation, played an important role. LNP was already campaigning in rural areas around the levels and enforcement of the legal minimum wage, and extended this campaign to demand something like MEGS. Under such pressure from different quarters the government introduced the Employment Guarantee Scheme in 1972. It eventually formalized through legislation, 'the EGS Act' of Maharashtra, in 1977 and began its full-fledged operation in 1979, which continues to date.

Once the MEGS came into operation, the activists and opposition parties continued their mobilising and conscientizing endeavours to ensure appropriate and timely implementation of the existing provisions of the scheme, and their expansion to ensure proper working conditions for the rural poor.²⁰ Almost all literature on MEGS, however, seem to be unanimous on the finding that since the late 1980s, especially in the 1990s and onwards, the MEGS declined in its efficacy because, *inter*

¹⁸*Yuvak Kranti Dal* (Yukrand) was started in 1969 as a student organisation in Pune. Gradually it evolved to work with the poor and *dalits* in the rural areas of Maharashtra, and in the process joined other groups in demanding the EGS. For a detailed historical account, see Joseph (2006).

¹⁹ Moore and Jadhav (2006); Joseph (2006).

²⁰Joseph (2006) has documented many accounts of such endeavours: In Shirampur, due to the absenteeism of authorities work could not commence. In July 1972 the workers angrily reacted and even took two junior engineers hostage, only freeing them after higher officials intervened. However, since this still did not improve the situation, a *tehsildar* (revenue official) was subsequently taken hostage and the immediate commencement of EGS works was demanded in exchange for his release. This finally shook up the higher officials, who committed to opening five new EGS work sites. (*Grameen Shramik*, 1973, May, p 5, quoted in Joseph, 2006: 5150). In another instance in 1979, *Yukrand* activists organised *dalits* to demand that canal irrigation work be brought under EGS. The poor were also trained by them to execute this work themselves, thus making long-term employment opportunities available to them. In spite of the resistance to this demand by Maratha landlords, the state finally had to yield to the pressures generated by the rural poor (Joseph, 2006: 5152).

A more striking example of the level of mobilisation and activism induced among the rural poor working on the MEGS is found in this incidence: in a village, the *talati* (petty revenue staff) made sexual advances towards a *dalit* woman. Hundreds of EGS workers marched to the village office in protest. The women forced the *talati* out of his office, undressed him and garlanded him with *chappals* (slippers). He was then made to walk around the town while the women booed him (Joseph, 2006: 5152).

alia, the different activists' organisations and political parties involved in the past in mobilising the poor had either fragmented or shifted their attention to other issues.

Clearly, the central element of the MEGS story is that its success, particularly pronounced in the initial decades until the 80s, was in large measures due to the high degree of activism and political movements by enlightened and committed people, non-political organizations and also different political parties and their networks and coalitions. This helped the rural poor to gain capacity to voice their demand for the rights on offer by the MEGS and also pressure the state to respond effectively and in a sustained way.²¹

3. Envisioning of the EAS within the new Institutional Spaces of People's Empowerment:

Joshi and Moore consider, however, that the *institutional design* of the rights-based MEGS was the key to its success. Why? Because, they argue, it uniquely provided an *enabling programme environment* - characterized by more tolerance, credibility, predictability, and most important of all, the *rights of the people* - that unleashed the incentives for collective actions. Actions not only by those who represented the poor, but by the poor themselves to assert for their rights and ensure the persistence and effectiveness of the programme. They further argue that while a "new set of institutional arrangements for delivering public services to the poor is justified through the rhetoric of 'community', 'client demand', 'localism', little real attention is paid to *creating an organisational context that will enable the poor actually to organise to help ensure that programmes work in their favour.*"²² This may not be fully borne out from even their own accounts of the programme, which, in the final analysis, highlight the role that activists and political parties played in mobilizing the poor. It is not easy to disentangle the effects of the programmatic environment they talk of from the activists' role. Nonetheless, they do offer an important institutional perspective for examining rights-

²¹ This is best articulated in the words of an activist of the time, D S Deshpande of the *Lal Nishan Party*: "It is not the imagination of one individual but a long drawn out and continuous mobilisation and agitation by different groups and movements that made the passage of EGS possible". (Joseph's interview with Deshpande on 7 December, 2003, quoted in Joseph, 2006: 5149).

²² Joshi and Moore (2000: 51, emphasis added).

based programmes, especially the EAS. Notwithstanding the repercussions that the increasingly negative reports on JRY²³ may have had, this idea seems to have influenced policy makers in their shaping of the EAS. That its design might create the desired enabling environment for mobilization of the poor, and eventually render the poor capable of taking charge of the programme to make it more effective than the JRY, was the key idea of the time.

Nonetheless, being aware of the history of the MEGS, policy makers also knew that programme design alone would not be enough. MEGS worked because of a peculiar historical antecedent of a massive drought and the spearheading role of activists and politicians, which both preceded and also continued respectively with the making and the workings of MEGS. Thus, they also understood that a parallel to such factors was neither available, nor possibly would ever be. Why then, did they still persist with the idea of the EAS? Because the country was in the grip of another euphoria in 1993 when the constitutionally vitalized institutions of the *Panchayati Raj* were in the making, offering new democratic spaces of empowerment of the poor. Thus, additional reliance was placed on them and it was hoped that what history had done for the MEGS would be replicated by the new people's grassroots representatives that these crafted institutional spaces of empowerment would throw up in their thousands.

It is this dimension that seems to have been ignored by Joshi and Moore who viewed EAS as deficient in its rights-based approach as it lacked the legal base to the guarantee that MEGS had enjoyed. In the same vein it is argued that NREGS is superior to EAS because it legally secures the guarantee, similarities with EAS in almost all other respects notwithstanding. Such a stand assumes that a presence or an absence of a legal basis of the guarantee can make or break the mobilizing effects of the programme.²⁴ Notably, Joshi herself questions this idea in a recent paper, suggesting that legal underpinnings do not automatically enable the poor to obtain rights.²⁵ As the earlier

²³ See WP 1.

²⁴ For example, see the National Advisory Council's presentation on NREGS that singles out this factor as the key to the distinctiveness of NREGS (NAC, 2006).

²⁵ Joshi (2010).

account of the MEGS suggests, the MEGS experience was primarily shaped by the availability of the social catalysts, who spoke for the poor, stood by them in their struggles and gradually transformed their capacities to let them be able to direct it to serve their interests. It is additionally reinforced by the findings that the withdrawal of the activists from the scene in the 1990s adversely affected the MEGS, even though the institutional design of the programmatic enabling environment has not changed.

However, and as noted above, in the case of the EAS the new PRIs were expected to play the activist role. Many of the large number of new political actors in the rural areas as elected panchs and sarpanchs, and also the elected representatives to the higher bodies of the PRIs, represented the poor and labouring class of the society because of the provisions of reservations. It was reasonable to expect, therefore, that both because of their own interests in finding wage employment and also because of their political interests as representatives of the labourers, they would find powerful incentives to work as active agents for mobilizing the poor, and help them draw down the benefits of EAS to their areas. It is not difficult to see that such incentives did not require a legal basis to be unleashed. Additionally, and just as a number of Maratha farmers - the rural *kulaks* - in Maharashtra supported MEGS since it created village infrastructures in their farming interests, many of the sarpanchs belonging to powerful landed class were expected to support the EAS. As funds for the EAS were committed by the Government of India in full, this would have allowed the commission of adequate number infrastructural projects to let the powerful enjoy their maximum spill-over effects. At least in principle, this not only offered the *enabling environment* for the mobilization of the poor that Joshi and Moore so approvingly speak of, but also a range of local social catalysts and change agents who could work in a positive-sum framework to help the mobilization, should the absence of a legal provision come in the way. A win-win mode for the poor and the powerful in general, and their newly elected representatives in particular, thus, was hoped to robustly reinforce the EAS's design-based incentives for collective action.

4. New grassroots actors in action in MP; old bureaucrats masquerading as mukhiyas in Bihar: The Case for an ‘experimental’ and a ‘control’ group comparison

This research aims to examine the working of the EAS in the field of MP through this framework. It, thus, pays special attention to the interplay between interests, both personal and representational, of the local elected change agents and matching incentives offered by the EAS on the one hand, and its programmatic enabling environment on the other, to unravel the story of EAS. Looking at the EAS through this perspective assumes a special relevance since the MP study on the EAS is also being viewed through a comparative framework with the Bihar study. This is due not just because the latter had also investigated, *inter alia*, EAS in 1999-2000, but also, and more critically, because until 2000 there were no PRI institutions in place in Bihar as for various legal reasons, it had not been able to conduct elections to the PRIs post 73rd constitutional amendment.

The lack of PRI elections posed a serious problem when the Bihar Government attempted to access state funds for a number of programmes. For example, JRY fund transfers to the sub-national states were conditional on employing the new PRIs for their implementation. Bihar’s solution was ingenious: by a government circular it notified the *panchayat sewaks*, the lowest government staff posted in a block office assigned to a panchayat to perform certain government duties, as the *mukhiyas* (sarpanchs)! Similarly, BDOs were notified as the *pramukhs* (chairmen of the Block or *Janpad panchayats*). This facade was created by Bihar to give the impression that, despite having no PRI elections, it still had the ‘functional equivalents’ of *mukhiyas* and *pramukhs* so that it did not lose out on receiving central funds. More incredible is the fact that Bihar got away with it; the centre apparently accepted, or more aptly, ignored, the fact that in reality bureaucrats masked as *mukhiyas* and *pramukhs* masqueraded as PRI representatives in the fields of Bihar, thus, did not deprive it of the federal funds.

Facade notwithstanding, there is no question that the centralist bureaucracy with the MLAs and MPs commanded and implemented EAS in Bihar. On the other hand, EAS operated in MP through the institutions of local governance manned by genuinely

elected people's representatives and the scale and the profile of these new actors, the possible social catalysts and change agents who had the potential to mobilize the poor on a vast scale in every village and block of MP, almost as a parallel to that witnessed in the MEGS.

The data presented in Tables 2.1 & 2.2 and Graphs. 2.1A to 2.2C are based on comprehensive information collected during the field study on elected panchs, sarpanchs, block (*janpad*) panchayat and district panchayat representatives of the PRIs for the three research districts for all panchayat elections conducted in MP to date. Diagram 2.1 depicts the representational schema of a block in Rewa district more clearly for an illustrative purpose.

**Table 2.1: Social Group of Representatives from all levels of PRIs:
Raipur (K) Block, Rewa District; Ghughri Block, Mandla District; and Manasa Block, Neemuch District in MP**

Raipur (K) Block, Rewa (Total Panchayats = 99)	SC	ST	OBC	General	Total

Source: Primary data from the field research.

These data clearly demonstrate (see the schematic diagram 2.1) that in MP typically about 1500 panchs, 100 sarpanchs, 25-30 block panchayat representatives and another 25-30 district panchayat representatives, thus about 1600-1700 of the PRI representatives in total, coming from all castes and classes, but the majority from the poor/backward castes, with not insignificant educational backgrounds represented the interests of the people of a single block at all critical layers of the programme implementation.

These polar opposite facts of the composition of the PRIs in Bihar and MP allow for an extraordinary robust analytic in their comparison, reinforced by the broad similarities between their studied districts, especially their socio-political features. Vaishali, Bhojpur and Ranchi²⁶ districts were studied in Bihar by a joint Cambridge-Keele project during 1998-2000²⁷ which aimed to explore the issues surrounding people's empowerment and developmental states in Bihar and West Bengal. Subsequently, this research (under report) has also studied the EAS in the districts of Rewa, Mandla and Neemuch, with a focus on unravelling the pro-people governance reforms undertaken in the decade of 1993-2003 in this state.

Vaishali in Bihar is not as feudal as Rewa in MP,²⁸ yet, it resembled the latter in the years when EAS was implemented (1993-99) in certain broad political features that make their comparison worthwhile. Vaishali's Yadav caste population were politically dominant not only in the district but in the entire state of Bihar during the 1990s due to fifteen years rule by the maverick Yadav politician Lalu Yadav, who was Chief Minister of Bihar from 1990 to 1995. Forced to resign after having been implicated in a corruption scandal, he managed to arrange to get his wife elected as Chief Minister in

²⁶Ranchi, the capital of Jharkhand State (carved out of Bihar in 2000 just after the completion of the Cambridge-Keele Research Project), was a part of unified Bihar and a prominent tribal district in its southern region.

²⁷ For the full account of the research and its findings, see Stuart, *et al.* (2005). Also the following papers based on this research can be seen for their focused discussion of certain select dimensions of the study: Corbridge, *et al.*(2003); Williams, *et al.* (2003a); Williams, *et al.* (2003b); Véron, *et al.* (2003); Véron, *et al.* (2006); and Srivastava, *et al.* (2002).

²⁸ The brief account of Bihar districts presented in the text above follows from the research reported in f.n. 28. The MP districts' accounts are based on the current fieldwork under report.

his place. There was a particularly heavy concentration of Yadavs in the research block Bidupur and the research panchayat Mohanpur. In fact, Lalu Yadav himself, and later his wife, were elected MLAs from the Raghapur legislative constituency, which is not only adjacent to Bidupur but also covered its few panchayats under its legislative constituency area. Unsurprisingly, therefore, there was a strong control of developmental and other government functions in Raghapur and also in Bidupur by Yadav politicians, big or small. The Bidupur's BDO in position during the period of research, expressed his anguish: "Every yadav in this area bosses around the block office as if he himself is Lalu Yadav, thus the CM of Bihar!"²⁹

The scenario in Rewa, MP, according to a widely talked about statement in the area, said to have been repeatedly made in public speeches by the then Chief Minister of the State, Digvijay Singh, was that Srinivas Tiwari (then the Speaker of the legislative assembly in MP) used to be unabashedly portrayed as the *de facto* chief minister of Rewa, while Singh would present himself as the chief minister of the rest of the 44 districts of MP. The field work in Rewa confirmed this in no uncertain terms: the septuagenarian politician Srinivas Tiwari, nick named the *White Tiger of Rewa*³⁰, literally ruled the entire district as his fiefdom. Even the poor rickshaw pullers would say: "not even a fig of tree swings here without the permission of Tiwari ji!"³¹ For Rewa, Srinivas Tiwari and his Brahman caste people were what Lalu Yadav and his yadavs were to Vaishali. In fact, his capture of local district administration, even the district panchayats institutions, was far more complete and unchallenged than that in Vaishali by Yadavs and their most powerful local MLA Bholu Babu, the Lalu Yadav's protégée of Lalu Yadav.

Research block Murhu in Ranchi district was a typical tribal block in Bihar (now in Jharkhand). In that respect it almost parallels the socio-political features of Ghughri block, Mandla, MP, which too is a predominantly a tribal block. Finally Bhojpur district

²⁹Interview, Mr. Rajnish, BDO Bidupur, 24 April, 1999.

³⁰Rewa is famous for white tigers in its forest areas. Srinivas Tiwari was given this name because all his hair, even eyebrows, turned completely white in colour (hence "white") and also for being ferociously feudal (hence "tiger")!

³¹*Field Notes*: 20 March, 2003. Informal discussions by the author with local rickshaw pullers who were unaware of author's identity or research agenda.

in the central part of Bihar could be seen as resembling, though not as closely as the previous two cases, Neemuch in MP, especially in respect of the level of awareness and empowerment of the common people. Bhojpur has a long history of mobilisation of the poor by CPI-ML, an extreme-left political party active in central Bihar.³² Despite the absence of any similar left-wing activities in Neemuch, it became clear during the field research that a broadly similar level of awareness and assertiveness prevailed among the common people of Manasa block in particular and in Neemuch district in general. Harsh environmental conditions have led to the emergence of a remarkable level of peasant entrepreneurship in this area, which also ensured labourer involvement in large measures. And feudal oppressive social structural features are largely absent due to the vast majority of the population being backward caste Patels and Patidars. As a result people feel less distanced from the power structure of society in this region, which works in highly exclusionary ways when controlled by high-caste people in feudal regions. Unlike the other researched areas, pronounced penetrations of party-based mobilisations, even deep into the villages, by both prominent parties of MP, the Congress and the BJP, in this region have also been a significant contributor to the process of empowerment of the common people.

These broad but important similarities between the studied districts of Bihar and MP on the one hand, and the fundamental difference in the local governance structures critically involved in the implementation of EAS on the other, allow for comparison in almost an ideal way, i.e., by treating Bihar as a ‘control’ and Madhya Pradesh an ‘experimental’ group. Hence, a Bihar/MP comparison around the workings of the EAS may prove insightful for both furthering the debate on the rights-based anti-poverty programmes, and also examining the role that PRIs can play (or not) in ensuring its pro-poor outcomes.

³²In the 1970s and 1980s, CPI-ML operated underground to mobilise landless labourers and poor peasantry, and waged struggles on their behalf against social oppression especially of their womenfolk, their political marginalisation and also on economic issues. In the late 1980s the group came out of hiding and started participating in elections. They have been winning parliamentary and assembly seats in every election since their entry into the democratic process, especially in the Bhojpur region.

5. The EAS: Design and Funds and their reach to the Fields

The Employment Assurance Scheme (EAS) was introduced on 2nd October, 1993. In the first phase, rural areas of 1778 blocks of 261 districts, that were in the drought-prone, desert, tribal and hill areas, were covered by it. During 1994-95, it was extended to 409 blocks having larger concentrations of tribal population. In March, 1995 the scheme was further extended to 256 blocks in the flood-prone zones. Finally in 1997-98 all 5448 rural blocks of the country were brought under its ambit.

The vision and objectives of EAS and its institutional design as the first national right-based programme were spelt out by its Manual.³³ Its critical elements are highlighted below:

OBJECTIVES

- **Primary:** 100 days assured employment in the lean seasons for a maximum of two labourers from each registered rural household.
- **Secondary:** Infrastructural development of the village through creation of durable assets.

MODE OF IMPLEMENTATION

- **Demand-led:** If a minimum of 20- (but in special circumstances, 10) labourers from the registered households demanded employment, the state was obliged to start a suitable employment generating project within 15 days of the demand and within five kilometres of their residence.

RESOURCES

- **In principle, unlimited:** Available until the demand was met (up to 100 days). The first national anti-poverty programme for which the state in principle committed the availability of resources in an open ended way. Unlike other programmes in supply mode for which financial targets were fixed in advance, EAS's

³³ GoI, MoRD (1993).

financial commitment was determined by the **demand of the people**. The Centre and the state governments shared the resource burden in an 80:20 ratio.

BALANCE BETWEEN THE OBJECTIVES

- Schemes with 60 % labour and 40% material component
- Illustrative sectoral distribution of resources: water and soil conservation including afforestation, agro-horticulture: 40%; minor irrigation works: 20%; link roads: 20%; primary school and *anganwadi* (child care) buildings: 20%

As this right-based programme with an open-ended financial liability required state governments to contribute 20% of the cost, their commitment was critical. The relevant documents reveal that both Bihar and MP not only unequivocally accepted the Government's vision but also reinforced it with their own guidelines³⁴. These in essence robustly reiterated the programme's critical focus on meeting the needs and demands of *akushal majdoor* (unskilled labour). Further, they clarified to the field functionaries that the "program is demand-driven and has no financial limit. The required resources as per the need would be made available continuously."

This was an extraordinary commitment by the federal and also the sub-national states. The fund flow facts were therefore examined to see whether that commensurately reflected this commitment. Table 2.3 shows that a total of Rs. 114.6 billion was made available in the country by the Government and all sub-national states together during 1993-98. During this period, 198.81 billion was also made available under the JRY (Table 1.2, WP 1). Since EAS had assured employment to people in need during the lean seasons and when other programmes were not able to generate adequate employment, the availability of Rs.114.6 billion as additional resources to ensure enough employment was not an insignificant amount. The overview of the fund flow from the Government to the research blocks in MP is shown in Graph 2.3. MP received Rs. 13.7 billion in this period.

(Figures in millions)

 = Research districts*

* (i) During this period (94-98), Dindori was included in Mandla district. Hence it had 16 blocks during this period and funds shown here were invested for under EAS from Mandla to all its 16 blocks. After formation of Dindori as a separate district in 2000-01, Mandla is left with 9 blocks.

(ii) Neemuch was within Mandsaur district till 1999-2000. Undivided Mandsaur had 8 blocks including 3 blocks of Neemuch districts. During this period (94-98), EAS funds shown here thus were invested by Mandsaur district to blocks of Neemuch. After formation of Neemuch as a separate district in 2000-01, Neemuch operated independently with its 3 blocks.

Diagram 2.2: Tracking the EAS Fund flow from Centre down to Research Blocks and Panchayats (1993-98): An Overview

Note: * (i) During 1994-98, Mandla included Dindori district and Neemuch was within Mandsaor district.

Source: (i) The country level data are from CAG (2000). See Appendix I .for details. (ii) The State level data have been compiled from DoPRD, MP (1997 to 2002, 6 volumes). See Appendix II. for details (iii) The District, Block and Panchayat level data have been collected from the office of the Chief Executive Officer, Zila Panchayats of Rewa, Mandla and Neemuch districts during field work.

This was spread among its 45 districts, resulting in a flow of Rs. 202.53 million to Rewa, Rs. 430.43 million to Mandla and Rs. 89.55 million to Mandsaur (it included Neemuch district in 93-98). These were spread over their blocks giving Rs. 27.44 million, Rs. 22.88 million and Rs. 16.45 million respectively to the research blocks Raipur (K), Ghughri and Manasa during this period. Within blocks, funds were further distributed across their panchayats, where they were used to execute EAS projects to generate employment. Tracking the fund flow down the research panchayats, it was found that Rs. 2.99 lakhs in Delhi, Rs. 3 lakhs in Ramhepur and Rs. 3.50 lakhs in Sandiya were invested in road and other projects.

6. View from the fields of MP and Bihar

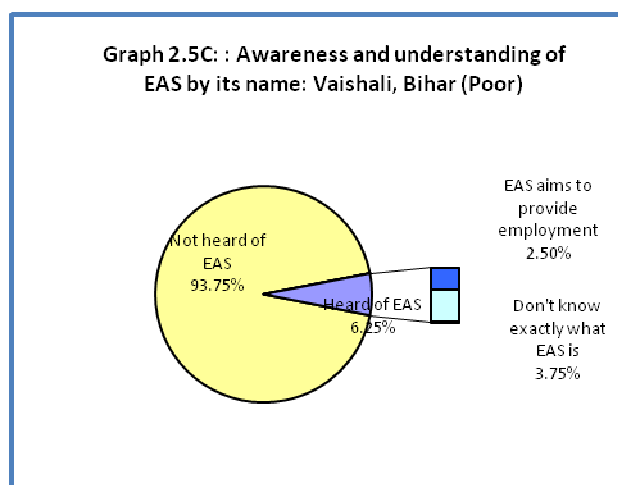

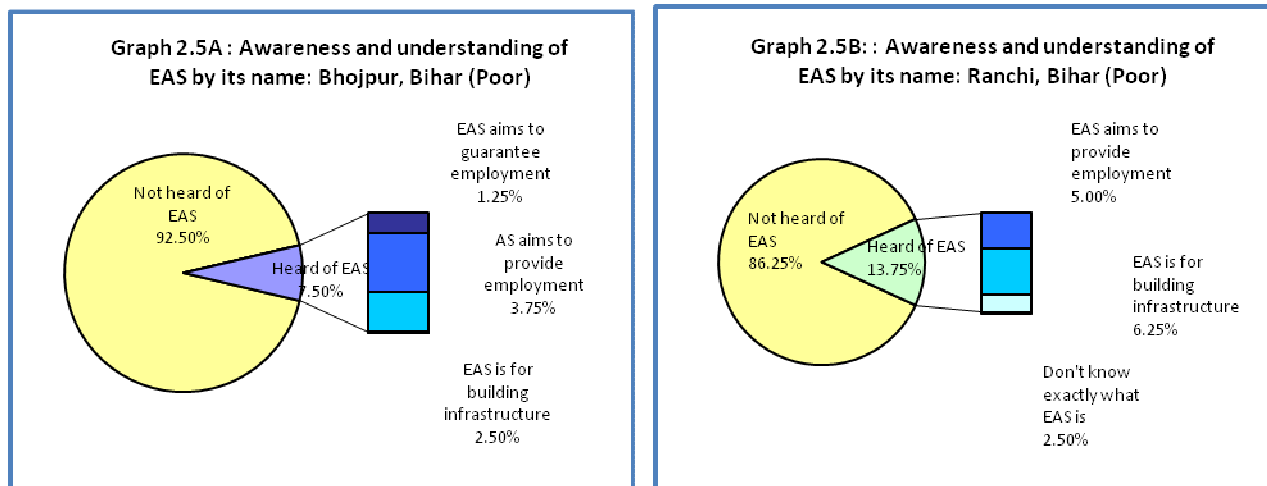

Had the vision of a right-based programme been turned into reality? Though a number of dimensions of the EAS were studied in Madhya Pradesh, the findings of only a few select facets central to exploring how well the new institutional features of implementation of EAS worked (or not) in MP especially in comparison to Bihar are reported. These are: (i) awareness of EAS, especially its rights-based or demand-driven feature; (ii) distribution of job cards to labourers as an official recognition of the entitlement to 100 days employment; (iii) employment provided under the EAS; and (iv) people's demand for employment and its result.

6.1. Awareness of the entitlement of 100 days employment and of the right to demand it: A rights-based programme such as EAS could only operate if people were aware of this feature. Table 2.4 and Graphs 2.5A to 2.5C clearly reveal that the poor in all three research panchayats in Bihar were barely aware of EAS.

Table 2.4: Awareness of EAS by its name: All Panchayats, Bihar (Poor & Non-Poor)

Have you heard of EAS? What do you know of EAS?	Korendehri (Bhojpur)		Mahil (Ranchi)		Dhubauli (Vaishali)	
	Poor (N=80)	Non-Poor (N=20)	Poor (N=80)	Non-Poor (N=20)	Poor (N=80)	Non-Poor (N=20)
Not heard of EAS	92.50%	75.00%	86.25%	45.00%	93.75%	75.00%
Heard of EAS Total	7.50%	25.00%	13.75%	55.00%	6.25%	25.00%
EAS aims to guarantee employment	1.25%	0.00%	0.00%	0.00%	0.00%	0.00%
EAS aims to provide employment	3.75%	10.00%	5.00%	0.00%	2.50%	5.00%
EAS is for building infrastructure	2.50%	10.00%	6.25%	35.00%	0.00%	10.00%
EAS is a government scheme	0.00%	0.00%	0.00%	0.00%	0.00%	0.00%

Source: Primary data from the field research.

Source: Primary data from the field research.

Roughly 14% who had heard of EAS in Ranchi only knew it as a programme for building infrastructure or providing employment, but not as the one that assured them of 100 days employment. Only one respondent in Bhojpur (1.25%) knew this crucial feature among 7.50% of the poor who had heard of the EAS, but the remaining 7.5% respondents among them, and all 6.5% who too had heard the name in Vaishali, did not, even though they knew of EAS in different ways.

Table 2.5 and Graphs 2.6A to 2.6C show the corresponding responses from MP. These present a combined picture of their awareness of EAS by its direct name as well as by any other local name. At first glance, the level of awareness appears to be higher in MP.

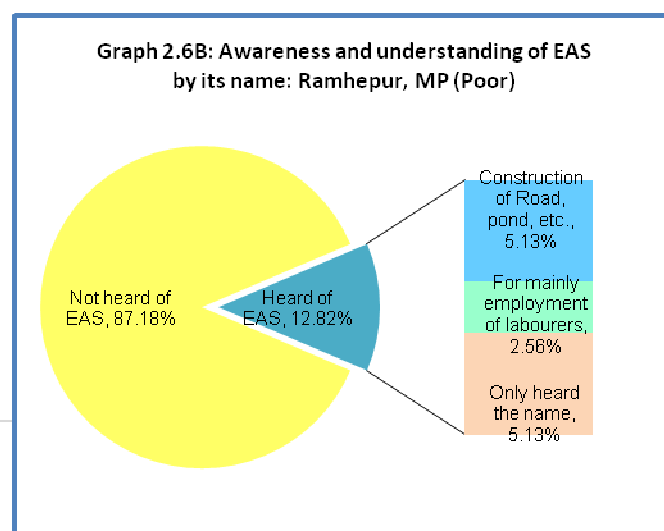

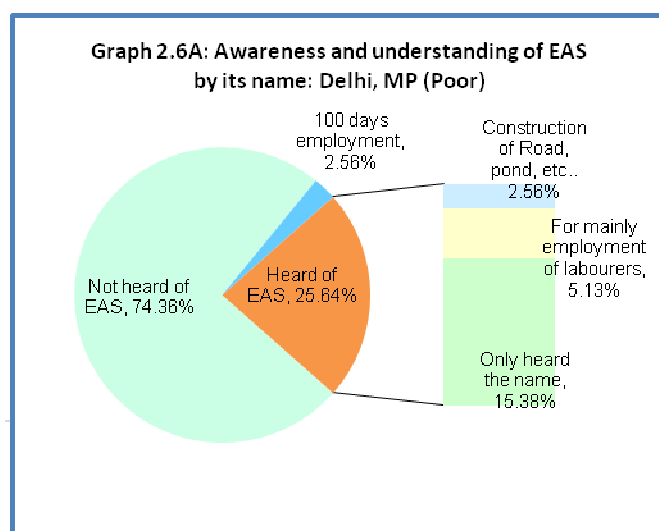

Table 2.5: Awareness of EAS (directly or by other name): All (Main) Panchayats, MP (Poor & Non-Poor)

Have you heard of EAS? Do you know EAS by other name? What do you know of EAS (in both cases)?	Delhi (Rewa)		Ramhepur (Mandla)		Sandiya (Neemuch)	
	Poor (N=39)	Non-Poor (N=11)	Poor (N=39)	Non-Poor (N=11)	Poor (N=36)	Non-Poor (N=10)
Not heard of EAS	74.36%	63.64%	87.18%	72.73%	66.67%	60.00%
Heard of EAS	25.64%	36.36%	12.82%	27.27%	33.33%	40.00%
100 days employment	2.56%	9.09%	0.00%	0.00%	0.00%	0.00%
For employment; but 100 days not necessary	0.00%	0.00%	0.00%	9.09%	2.78%	0.00%
For mainly employment of labourers	5.13%	9.09%	2.56%	0.00%	0.00%	10.00%
Construction of Road, pond, etc.	2.56%	0.00%	5.13%	9.09%	0.00%	0.00%
Employment to poor, medicines etc.	0.00%	9.09%	0.00%	0.00%	0.00%	0.00%
Only heard the name	15.38%	9.09%	5.13%	9.09%	30.56%	30.00%
Grand Total	100.00%	100.00%	100.00%	100.00%	100.00%	100.00%

Source: Primary data from the field research.

On closer examination, however, the story is similar to that in Bihar. In Delhi panchayat, Rewa only 2.56% of the poor (1 person) knew, as in Bhojpur, that EAS was a demand-driven programme. All other poor referred to EAS as a programme for road or pond construction or for providing employment and (erroneously) medicines to the poor or similar features. Hardly anything was mentioned that was close to its demand-led dimension.

In the final analysis, the story of awareness of EAS in both MP and Bihar are equally dismal.

Source: Primary data from the field research.

A caveat is in order here: This dismal level of awareness in MP did not imply absent knowledge of executed EAS projects in their areas: people were far more aware of EAS projects than of the JRY's (see WP 1). This may be due to the fact that JRY projects were very small in scale (average cost Rs. 10,000- 15,000), with a number of them possibly done largely on paper. So when the official list was read out to people, very few schemes could be confirmed by them. In contrast, EAS schemes were usually larger in scale (average cost Rs. 3.5 to 4 lakhs). In Delhi panchayat, a 1½ km road from Delhi to Mohgarh village costing Rs 2.99 lakhs was no doubt executed on the ground: everybody pointed to it in the field, though not without veiled comments about possible corruption in its execution. Similarly in Ramhepur and Sandiya, a number of respondents recognized EAS projects from the official list (see Table 2.6).

Table 2.6: EAS Schemes of Research Panchayats of Madhya Pradesh

Sl. No.	District	Block	Panchayat	Year	Name of EAS Scheme	Amount (In Rs.)
1.	Rewa	Raipur (K)	Delhi	1997	Delhi to Mohgarh road 1K.M. W.B.M.	299,000
2.	Mandla	Ghughri	Ramhepur	1993-94	Pool Margh to Ramhepur	300,000
3.	Mandla	Ghughri	Dongarmandla	1993-94	Gali viparan Dogaranmandla	230,000
4.	Mandla	Ghughri	Dongarmandla	1996-97	Primary. Sschool Katanga	275,000
5.	Mandla	Ghughri	Dongarmandla	1998-99	Dongarmandla to Main Marg	250,000
6.	Neemuch	Manasa	Sandia	2001-02	Farshikaran in Har. Moh. (Talni)	100,000
7.	Neemuch	Manasa	Sandia	2003-04	Nalla farshikaran Sandiya	200,000
8.	Neemuch	Manasa	Sandia	2003-04	Road from Alhair chauraha upto Sandiya	50,000

Source: Primary data from the field research.

However, these confirmations only indicated that the read out EAS projects had been executed (though usually not without corruption). It did not mean that the people also knew that the EAS projects which they confirmed should have resulted from a demand-led programme. The lack of awareness about the EAS entitlements was not *because of* absent EAS projects, but *despite* their presence, just as in Bihar.

6.2. Availability of job cards to labourers: An extremely critical feature of the EAS was the registration of labourer families and provision of job cards to them: it was hoped that the cards would spread awareness of employment rights where other methods failed.

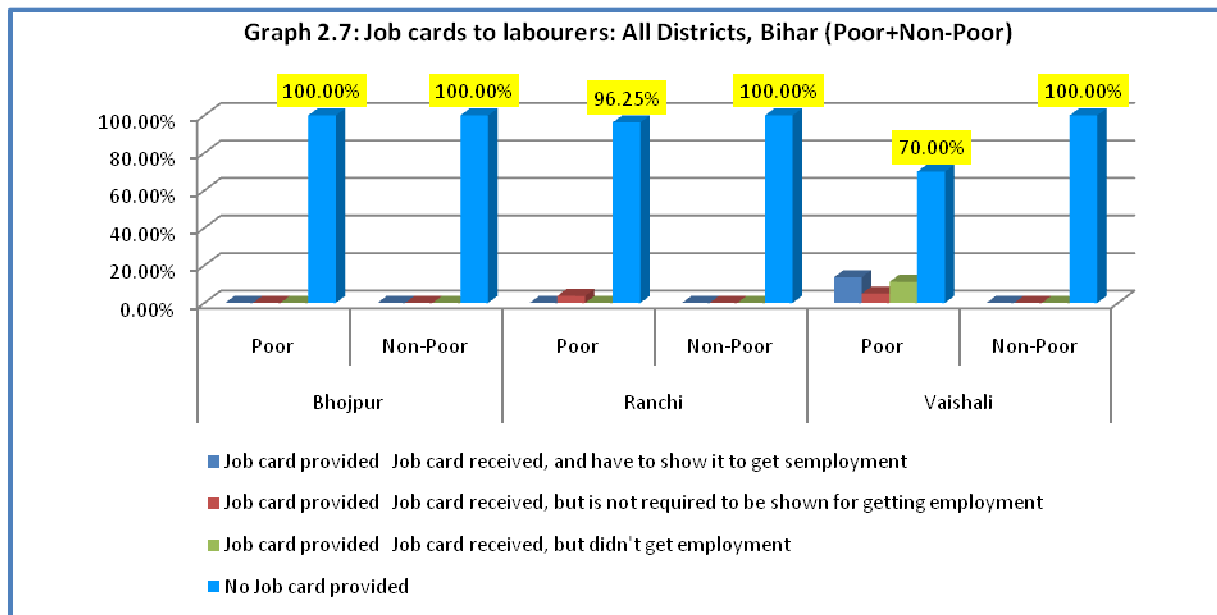

Table 2.7: Job cards to labourers: All Panchayats, Bihar (Poor & Non-Poor)

Were you given a Job card under EAS? Did you have to show it to get employment?	Korendehri (Bhojpur)		Mahil (Ranchi)		Dhubauli (Vaishali)	
	Poor (N=80)	Non-Poor (N=20)	Poor (N=80)	Non-Poor (N=20)	Poor (N=80)	Non-Poor (N=20)
Job card provided	0.00%	0.00%	3.75%	0.00%	30.00%	0.00%
Job card received, and had to show it to gets employment	0.00%	0.00%	0.00%	0.00%	13.75%	0.00%
Job card received, but was not required to be shown for getting employment	0.00%	0.00%	3.75%	0.00%	5.00%	0.00%
Job card received, but didn't get employment	0.00%	0.00%	0.00%	0.00%	11.25%	0.00%
No Job card provided	100.00%	100.00%	96.25%	100.00%	70.00%	100.00%
Grand Total	100.00%	100.00%	100.00%	100.00%	100.00%	100.00%

Source: Primary data from the field research.

However, in Bihar the poor level of awareness of EAS was partially due to the fact that this important dimension was not implemented effectively (Table 2.7, Graph 2.7). Despite the high level of socio-political empowerment of the poor in Korendehri panchayat (Bhojpur district) in Bihar, highlighted earlier, nobody in the entire panchayat had been provided with a job card. In Mahil (Ranchi), just 3.75% of the poor had received such cards, but their holders had no idea what it entitled them to, as in practice the availability of employment under EAS was entirely unconnected with its possession (or not). In Vaishali, though, 30% of the poor had a job card. But they too were unaware of its rights-based feature. The poor schedule caste labourers who were provided with job cards by their informal leader (known to be close to prominent

national level SC politician Rambilas Paswan, then the Railway Minister in the Government of India), thought he had sent the cards to get them jobs in the railway works!

Source: Primary data from the field research.

Table 2.8: Job cards to labourers: All (Main) Panchayats, MP (Poor & Non-Poor)

Were you given a Job card under EAS? Did you have to show it to get employment?	Delhi (Rewa)		Ramhepur (Mandla)		Sandiya (Neemucyh)	
	Poor (N=39)	Non-Poor (N=11)	Poor (N=39)	Non-Poor (N=11)	Poor (N=36)	Non-Poor (N=10)
Job card provided	5.13%	0.00%	2.56%	0.00%	2.78%	0.00%
Job card received, but didn't get employment	5.13%	0.00%	2.56%	0.00%	2.78%	0.00%
No Job card provided	94.87%	100.00%	97.44%	100.00%	97.22%	100.00%
Grand Total	100.00%	100.00%	100.00%	100.00%	100.00%	100.00%

Source: Primary data from the field research.

Source: Primary data from the field research.

As PRI institutions were in command of implementation of the EAS in MP, it was expected that at least in this dimension MP would yield better results. Yet, as Table 2.8 and Graph 2.8 reveal, the status of job card distribution in MP was as bad as, or even worse, than in Bihar. Among the poor, 5% in Delhi (Rewa), the highest figure, to 2.5% in Ramhepur (Mandla) were privileged holders of the job cards, though without any advantage as they were not required to be shown to receive employment in EAS projects.

In sum, job cards were either not distributed (largely), or were effectively redundant and thus failed to enhance people's awareness of the right-based provisions of the EAS in both states.

6.3. Employment under EAS: Although one would expect that the ignorance of rights on offer by the EAS would lead to lack of employment, the research showed the opposite. Since projects *were* executed regardless of whether they were demand rather than supply-led, employment, howsoever meagre, was created despite the varying levels of accompanying corruption.

Table 2.9: Employment under EAS: All Panchayats, Bihar (Poor & Non-Poor)

Did you or any of your family member get employment under EAS?	Korendehri (Bhojpur)		Mahil (Ranchi)		Dhubauli (Vaishali)	
	Poor (N=80)	Non-Poor (N=20)	Poor (N=80)	Non-Poor (N=20)	Poor (N=80)	Non-Poor (N=20)
Worked in EAS	25.50%	0.00%	21.25%	15.00%	0.00%	0.00%
Only Males	22.50%	0.00%	18.75%	15.00%	0.00%	0.00%
Only Females	0.00%	0.00%	1.25%	0.00%	0.00%	0.00%
Males and Females	2.50%	0.00%	1.25%	0.00%	0.00%	0.00%
Not worked in EAS	75.00%	100.00%	78.75%	85.00%	100.00%	100.00%
Grand Total	100.00%	100.00%	100.00%	100.00%	100.00%	100.00%

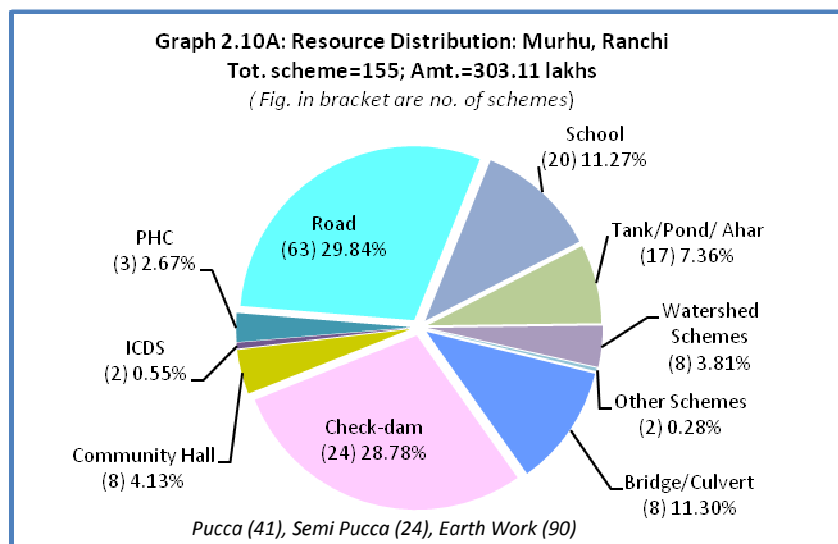

Source: Primary data from the field research.

Notwithstanding the non distribution of job cards in Bhojpur, 25% of the poor there and 21% in Ranchi received some employment. In Vaishali none did (Table 2.9, Graph 2.9) as (against programme guidelines) a contractor who hired outside labourers was brought in to do the work.

Source: Primary data from the field research.

This exception apart, the limited employment generated in Bhojpur and Ranchi resulted from two counts: first, because very few schemes ran in these areas and, second, most projects were of the *pucca* (concrete; building type) nature. The primary objective of the EAS, i.e., employment generation, thus stood replaced by its secondary objective: creation of durable infrastructures in the villages. In a *pucca* project, even in ideal circumstances 80% of costs go towards purchasing materials (cement, steel rods, bricks, sand, etc.) and only 20% in creating employment. Even that has skilled labourers component which when discounted leaves little scope for the generation of unskilled employment. Graphs 2.10A to 2.10C present the consolidated information on different types of projects undertaken in the three research areas of Bihar.

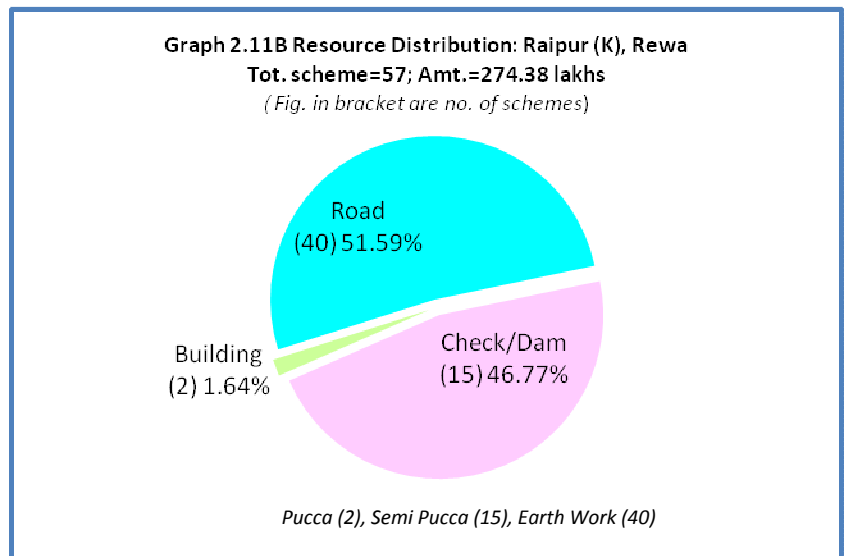

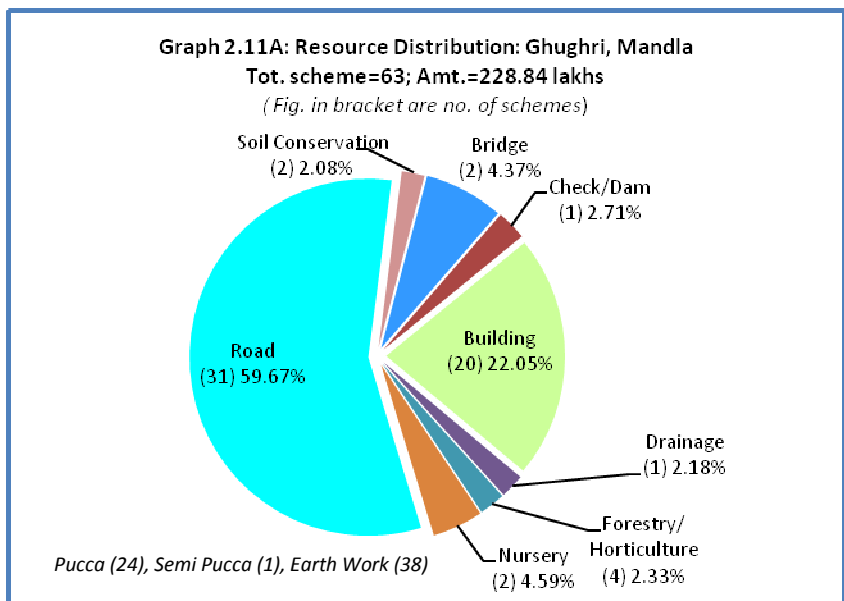

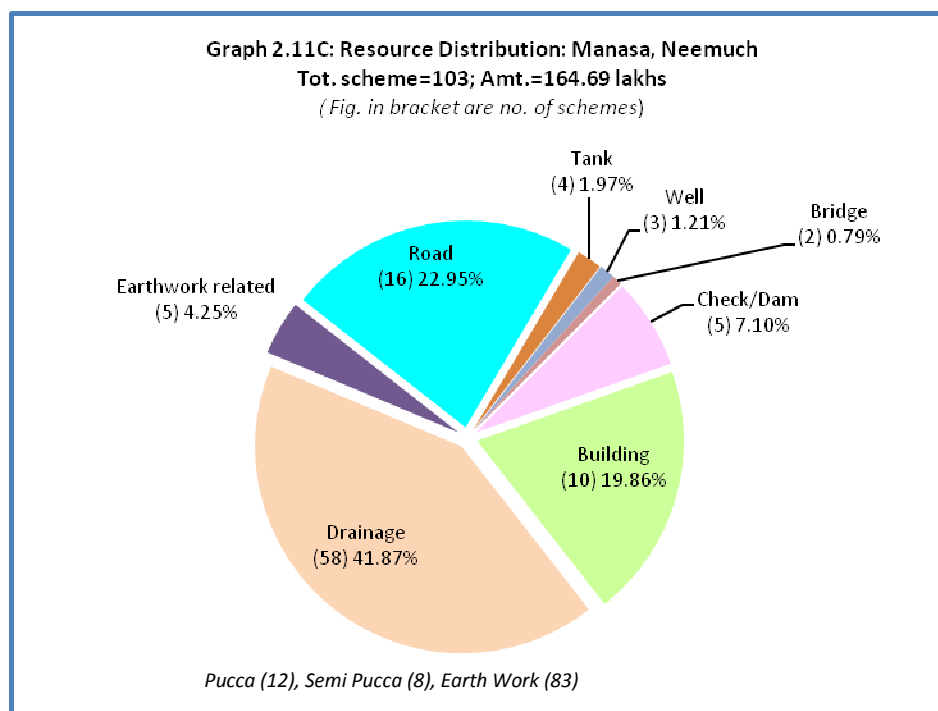

Source: Primary data from the field research.

They along, with the connected facts from the field suggest, that building projects were present in large numbers. Given their technical nature, they had little capacity to generate unskilled employment. Even the road projects taken up in greater number in Vaishali and also partly in Bhojpur preferred hard-metalled surfacing, sometimes even with black topping, to make them all weather roads. Consequently, the cost of their

material components increased. This and the inevitable corruption that abounds in earthwork related projects explain why only as few as 25 to 21% poor reported positively on the availability of employment in Bihar.

In MP road projects were preferred in two research blocks: Raipur (K), Rewa (av. cost: Rs. 3.54 lakhs) and Ghughri, Mandla (av. cost: Rs. 4.41 lakhs). In Manasa, 63% were *pucca* type schemes (Graphs 2.11A to 2.11C). As in Bihar, road projects were largely material oriented and more of them were of the more expensive water-prrof type.

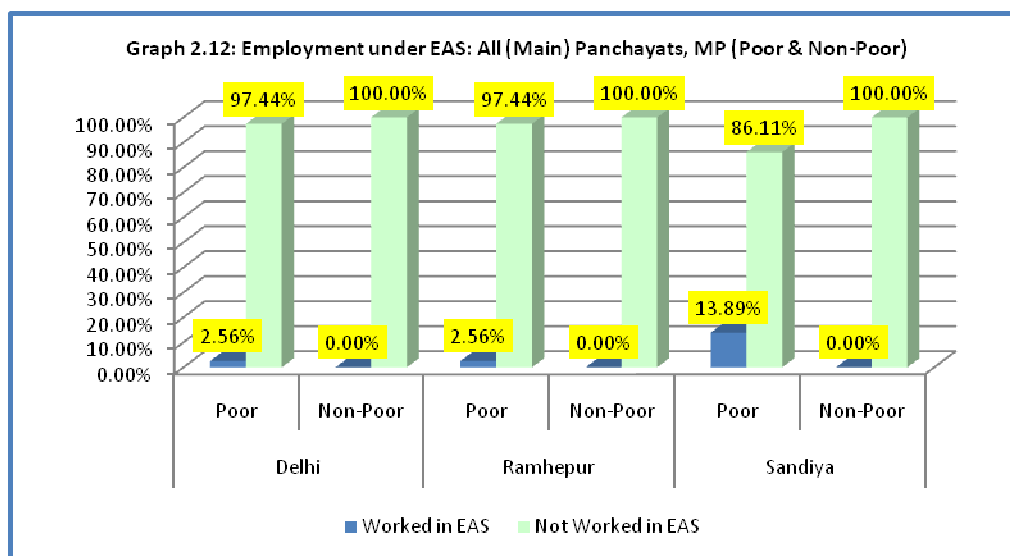

Source: Primary data from the field research.

The generation of unskilled employment in MP seemed then, by default, limited. Additionally, machinery rather than human labour was used for earthworks in Neemuch and Rewa, and large scale corruption especially in Rewa (see Section 7.2.3 below), combined to finally create the meagre amount of employment reflected in the responses compiled in Table 2.10 and Graph 2.12 below.

Table 2.10: Employment under EAS: All (Main) Panchayats, MP (Poor & Non-Poor)

Did you or any of your family member get employment under EAS?	Delhi		Ramhepur		Sandiya	
	Poor (N=39)	Non-Poor (N=11)	Poor (N=39)	Non-Poor (N=11)	Poor (N=36)	Non-Poor (N=10)

Got work every time I asked for	2.56%	10.26%	0.00%
Grand Total	100.00%	100.00%	100.00%

Source: Primary data from the field research.

6.4. Response to Demand for Employment: In Delhi (Rewa) just 2.56% poor confirmed that they got work through EAS (Table 2.10) while 92% said that they never asked for work (Table 2.11, Graph 2.13). Why? 37% were unaware of EAS projects and 21% said that the sarpanch employed his own men or hired labourers from outside. However, if the project had adequate employment generation potential (i.e., had not been heavily materially loaded, and/or not marred by corruption or use of machinery) even if they were unaware of the EAS connection, in all likelihood their labour would still have been required. A simple calculation of the actual road project executed in Delhi panchayat illustrates:

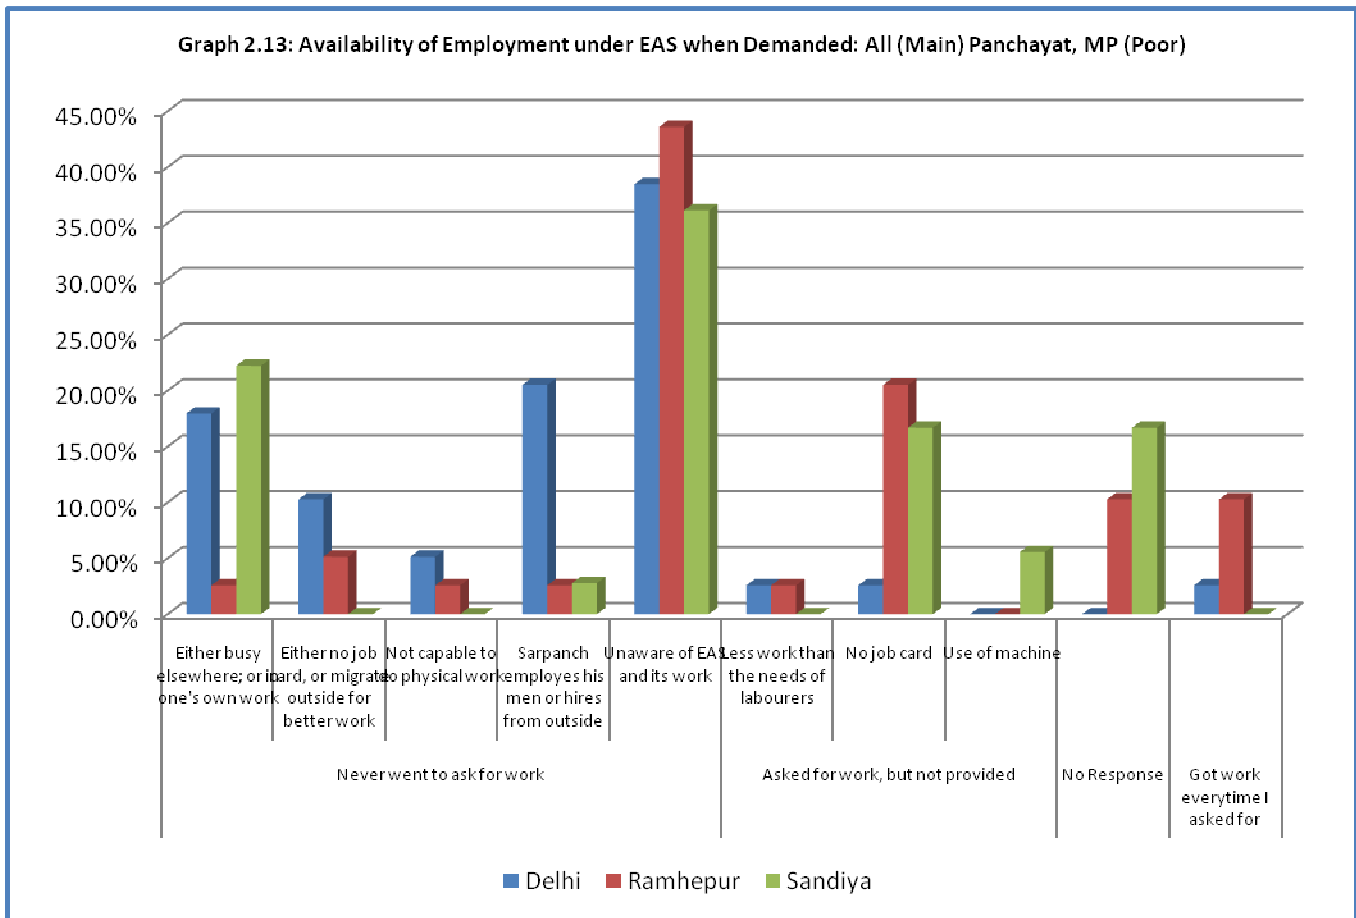

The official cost estimate of the WBM road project was Rs. 2.99 lakh. Due to the WBM provision, approximately only 60-65% of the cost, about Rs. 1.80 lakhs, would have gone towards the earthworks. Assume that the estimate had no artificial build up (to facilitate misappropriation of funds) and that no other leakages were allowed (obviously ideal assumptions). In 1997-98 when the project took place, the minimum wage rate was Rs. 45-50 per day. Thus the project had the potential to generate about 3600 mandays. If an average of 25 days per person employment, (a best case scenario since the Planning Commission evaluation revealed that in MP under EAS only 13 days per person employment had been generated on average³⁵), is assumed, the road project had the potential to employ 144 persons for 25 days. If a more realistic state average figure reported by the evaluation study is taken for calculation, similarly about 240 people could have been employed for 15 days.

The BPL survey database for the state of MP shows that in Delhi panchayat 188 poor households primarily depended on casual work. So, if the road project had actually been executed as per its estimates, almost every household would have got a job for at least 25 days, whether they were aware of the EAS provisions or not. Had this happened, the most response informing unawareness of the EAS project for not looking for employment in it would have been most unlikely.

The only scenario in which such a response is plausible is the following: (a) the estimate was considerably inflated by design *ex-ante*, hence the actual quantum of earthwork done was much less; (b) with or without (a), high leakages during actual execution significantly compromised the required quantum of earthwork, and also the project quality; and (c) use of machinery curtailed labour requirements. Any of these elements independently or in combination could so reduce the labour requirement that even the other major response, “sarpanch preferred his own men as labourers (or hired a few from outside)” can be seen as quite plausible as well.

³⁵ GoMP (2002).

The field investigations suggest that in both states (a) and (b) were rampant in road projects, thus mainly responsible for the story Table 2.11 tells.

Source: Primary data from the field research.

In the set of responses in this table, further confirmation of this analysis is given by the 5 % poor who reported that they were refused work because there were more workers than work available. Had the earthwork been done as per the estimate the labour need (about 144 persons), would not only have made such a refusal highly unlikely, but even EAS unaware jobseekers would have received employment

Graph 2.14: Availability of Employment under EAS when Demanded: All Districts, Bihar (Poor)

Source: Primary data from the field research.

The Bihar responses further reinforce these findings (Table 2.12, Graph 2.14). Here too, the dominant reasons for having not gone to ask for work were the same two sets as observed in MP, ‘unawareness of EAS work’ and ‘contractor favoured his men or hired labourers from outside’. The Bihar responses mentioned contractors rather than sarpanchs due to the absence of PRIs during that period. In MP all works up to Rs. 3 lakhs were executed by the panchayat, which simply meant execution by sarpanchs.³⁶

³⁶It should be noted that many of those who were viewed as contractors in Bihar during the field work in 1999 (when PRI institutions were absent) were powerful and influential local persons. Most of them subsequently got elected as *mukhiyas* (sarpanch). If Bihar field sites are revisited now and the same question is asked, in all likelihood people would point out to the same faces they did in 1999, but would call them now *mukhiyas* instead of contractors!

Table 2.12: Availability of Employment under EAS when Demanded: All Districts, Bihar (Poor)

Did you ask for Employment? If yes, did you get it and if not, what were the reasons? If you did not asked for employment, why?	Bhojpur Poor (N=80)	Ranchi Poor (N=80)	Vaishali Poor (N=80)
Never went to ask for work	73.75	77.50	95.00
<i>Either busy elsewhere; or in one's own work</i>	13.75	26.25	28.75
Better income/employment opportunities	10.00	26.25	17.50
Female respondent & male outside village	1.25	0.00	0.00
Dislike labouring work	2.50	0.00	11.25
<i>Not capable to do physical work</i>	10.00	6.25	15.00
No adult member available for employment	0.00	0.00	1.25
Physically unfit	10.00	6.25	13.75
Contractor employs his men or hires from outside	40.00	41.25	13.75
No hope as others favoured anyway	2.50	3.75	13.75
Would never try without being called	27.50	37.50	0.00

Source: Primary data from the field research.

The one unmistakable conclusion that can be drawn from these comparative set of findings is that EAS ran in MP with almost no sign of people's awareness and involvement and certainly not as a demand-led employment programme. Thus, its implementation appeared to be no different than that in Bihar, despite the major difference in the local governance structures.

7. View from the District and Blocks of MP and Bihar

7.1. The Immediate Questions of Concern: These findings clearly raise the broader serious question as to why MP's elected PRI members did equally badly or in some respects even worse than their bureaucratic counter parts in Bihar. This would be analysed in some depth later in WP 5, but they also led to the following question of immediate concern that motivated to undertake further probe: if the EAS did not run as a demand-led programme in MP, how were the executed EAS projects selected within inter and intra-block competitive pressures for EAS resources? Also, if the study had involved *larger* numbers of panchayats and blocks, would the results have been different? In turn, following issues came under the focus of the probe:

- who were influential in controlling EAS resources and projects in MP?
- in what ways, i.e., skewed or symmetric, within and across different areas in MP?
- with what modalities: official and norm-based, or informal: by use of power and politics, networks, and/or money? and
- for what reasons, i.e., what were the driving interests and incentives, if not those offered by the programme?

Addressing these issues required moving up from the micro-level studies in the villages to block and district level to peep into the broader world of EAS resource distribution. In the process, a comprehensive database on EAS in MP was collected.

Table 2.13 records the annual summary of data on EAS projects collected from the offices of the District Panchayats of Rewa, Mandla Neemuch for all EAS projects executed between the years 1993 to 2000-01 in all 21 blocks of these three districts.³⁷

³⁷ The details of each project, its location (panchayat and block), cost, year of execution, agency responsible for execution and type and nature of project, whose summary is encapsulated in Table 2.13, are provided in Appendix IV.

Source: Compiled from the primary data from the field research.

The highlights of the database shown in Table 2.13 are as follows:

Data for all 1451 EAS projects covering 1487 panchayats in all 21 blocks of the 3 research districts, and involving an investment of Rs. 519.50 million have been compiled and analyzed. The district-wise disaggregated picture comprises:

- In Mandla district, 677 projects amounting to Rs. 242.02 million over a period of seven years in nine blocks and 472 panchayats

- In Rewa district, 463 EAS projects amounting to Rs. 230.35 million over a period of six years in nine blocks and 801 panchayats.
- In Neemuch, 311 EAS projects amounting to Rs. 47.13 million over a period of four years in three blocks and 214 panchayats.³⁸

This database is far more comprehensive than that obtained for Bihar (presented for comparison in Table 2.14 below). In Bihar, data on annual EAS projects executed in different panchayats were collected for only one research block in each of its three studied districts. It should also be noted that panchayats in Bihar are roughly six times more populous than their counterparts in MPs³⁹. Thus for a true comparison, *the number of villages in Bihar needs to be factored in as in Table 2.14.*

Table 2.14: Overview of the database on EAS in three research blocks in Bihar

<i>All Amounts In Rs. '00,000 (Lakhs)</i>

Source: Compiled from the primary data from the field research.

³⁸Neemuch district was split out of its parent district, Mandsaur, in 2000. Thus, its EAS data was only available for from 2000-01. By then the assurance dimension of 100 days employment under the EAS, and its demand-led nature, had been removed by a policy change. However, since in practice EAS never ran as a demand-led programme, it was still considered worthwhile to collect and analyse its data.

³⁹ The variation in population size of a panchayat is enormous across country. For example, a typical panchayat population in Kerala is 30,000, four times larger than in Bihar, and about 28 times that of MP (ARC, 2006).

The very preliminary compilation of the EAS database in MP allows the following broad observations:

(i) The distribution of EAS resources within districts appeared skewed, though in varying degrees. In Rewa, Gangev block received Rs. 325.95 lakhs in only four years, compared to Hanumana block's Rs. 222.06 lakhs in six years. Similarly in Mandla, where every block had received EAS funds for the whole seven years, the highest amount of Rs. 428.00 lakh went to Mandla block, whereas Mawai received only Rs. 166.80 lakhs. Neemuch also showed an asymmetry in fund distribution, though not as sharply as the other districts.

(ii) More strikingly, a number of panchayats in MP appear to have been completely denied any EAS funds with varying inter-district and inter-block intensity of exclusion. The highest exclusion is found in Rewa where 66.30% of panchayats did not receive any EAS funds. In Mandla only 35.17% of panchayats were excluded. Within districts too, the number of panchayats excluded or included by the EAS funds varied from block to block.

Limited data notwithstanding, in Bihar, Bidupur block in Vaishali appears to have the highest exclusion level with 73% of its villages untouched by EAS funds. The tribal Murhu block shows lesser exclusion (44.20%). Finally, it seems that, despite being comparatively more empowered, 45% of Bhojpur villages received no benefit from EAS.

7.2. Deeper Quantitative Analysis: These broad observations were then subjected to a deeper quantitative analysis.

7.2.1. The following dimensions of investigations were framed to drive the analysis to address the questions raised earlier:

1. In order to incontrovertibly establish the fact of skewed distribution it was necessary to ascertain whether the availability of EAS funds in a block followed some criteria consistent with EAS objectives, or was adhoc or arbitrary in nature. For

example, if it was found that EAS resources were invested in proportion to the population of blocks and panchayats, it could be argued that at least its top down distribution was fair to the people of the district as its per capita investment allowed equal access to resources in every area.

2. If the analysis established a perverse distribution, the second point to be investigated was which block(s), and panchayat(s) were unduly favoured and with what levels of unjustified funds?

3. If unduly favoured panchayats were identified, attempts should then be made to see the links, if any, from the qualitative findings of the field to these quantitative findings to understand the fuller story of why and how such captures and colonisation of EAS funds became possible.

4. Finally, it should be established whether this analysis conclusively establishes the fact that the aberrations and anomalies observed in the working of the EAS in the limited research panchayats were part of the larger pattern and story of EAS in MP or were exceptions.

7.2.2. The methodology adopted for the data analysis is as follows:

1. Identification of relevant parameters that might have influenced the distribution of EAS resources: Table 2.15 lists the “parameters of possible influence or correlation” that might affect the distribution of resources across panchayats and blocks.

Table 2.15: Parameters of possible influence on distribution of EAS resources

Parameters for analysis of EAS database (Population of the households containing the identified parameters)	The rationale of its selection
(1)	(2)
1. Total Population	EAS was a demand-given programme. Thus, on the broadest level blocks and panchayats with larger population could have more potentials to demand employment, thus can draw down more resources in their areas.
2. SC and ST Population	As the labouring class concentrate more in the SC & ST strata of the society, areas with their larger share in population are likely to place greater demand for EAS resources.
3. Means of Livelihood: Casual labour and also subsistence cultivation.	Areas with larger share of population comprising of families engaged in casual labour and also subsistence cultivation are patiently more likely to demand for EAS employment.
4. House type: Houseless, kuccha and semi pucca houses.	Another important proxy variable for people looking for wage employment.
5. Landholding: Landless and having less than one hectare land.	Landless households and wage labourers usually go hand in hand.
6. Labour force: Adult male and female labourers, including bonded labourers.	Population with a greater share of availability of adult male and female labourers is likely to put more demand on the EAS.
7. Migration status: Migrating in search of casual work and seasonal employment (excluding those who migrate for other types of employment or other purposes).	Whether in the EAS or in the NREGS in the present, one of the strongest claims in their favour made is that such a programme has high potentials for containing the migration of local labourers. Hence it is only likely that where migration levels are higher, the demand for EAS would be greater.
8. Preference of Assistance: Predominantly desirous of wage employment as assistance combined with those seeking self employment (also through labour work).	A very valuable data provided in the BPL survey database is about the preferences of assistance types expressed by the households during the survey. The obvious and strong correlation is that where a larger share of population has preferred wage employment as needed assistance, EAS would come as an ideal response to this.
9. Education upto Class X: The highest level of literacy in the household ranging from illiteracy to education upto class X.	The assumption is that the demand-led features of EAS would function better with higher level of its awareness and also the capacity among the people to assert for their entitlements exist. Education upto class X was considered reasonably good proxy variable of this dimension.
10. Education upto Class V	As labouring class is usually more concentrated in the lower literacy strata of the society, this parameter was also chosen though it implied some compromise with the level of awareness and assertiveness that is reflected better by the previous parameter.
11. Income level: The two lowest income strata, i.e. with monthly income per household of Rs. 250 or less and between Rs. 250 to 500 combined.	Households with this level of income are more likely to go for wage employment to gain some supplementary income to minimise the economic distress.

For parameters 1 and 2 in Column 1, the national database on population (and related information) from district to panchayat level for all states of India prepared by the Ministry of Panchayati Raj, Government of India was utilised⁴⁰

⁴⁰Available at <http://offerings.nic.in/directory/>

For the remaining parameters, the State database of the BPL survey 2002 of the Madhya Pradesh Government was used.⁴¹ It offers individual family-wise information on all households of the State of MP on a number of parameters including those listed in the table above. Their aggregate data in terms of household numbers are also presented from panchayat to state level for the entire state. To convert households into population, the population figures of panchayats, blocks and districts obtained from the national database of the Ministry of Panchayat, GoI were divided by the total household figures obtained from the BPL survey 2002 database to derive the household size. This was then used to obtain the household populations for the parameters mentioned in Column 1.

2. Calculation of the percentage deviation in distribution of EAS resources for each identified parameter: the theoretical ideal possible per capita investment of EAS for the district for each identified parameter was calculated:

$$\text{Per capita}_{\text{parm. } X} = \text{Actual EAS resources invested by a district in all years} \div \text{district popl.}_{\text{parm. } X} \text{ }^{42}.$$

Thereafter, for each block and panchayat the possible distribution of EAS resources in accordance with each parameter of correlation was calculated by multiplying the per capita EAS figure for a parameter obtained in the manner mentioned above with the population of the parameter under analysis:

$$\text{Distribution of EAS as per a parameter } x \text{ in a panchayat or block} = \text{Per capita EAS for parameter } x \times \text{Population of a panchayat or a block for parameter } x.$$

Finally, the percentage deviation between a panchayat's and a block's actual and parametric EAS amount (derived from the previous step) was calculated:

$$[\text{panchayat or block}_{\text{Actual EAS Amt.}} - \text{Same panchayat or block}_{\text{param. } X \text{ EAS Amt.}}] \times 100 \div \text{Same panchayat or block}_{\text{param. } X \text{ EAS Amt.}}$$

If the actual distribution of EAS resources come close or equal to any of the parameter based distribution, the percentage deviation would be close or equal to 0%

⁴¹Available at <http://bpl.nic.in/>

⁴²Except for parameters 1 & 2 in Table 2.15 for which population figures were directly obtained, for all other parameters these were derived from their corresponding panchayat and block level households figures, by converting them into population figures in the manner mentioned above.

and the attendant graph will show the line of percentage deviation as close to or overlapping with the x axis.

3. Identification of panchayats/blocks that revealed high percentage deviations across major parameters: Once the percentage deviations in EAS resource distribution were calculated for all panchayats and blocks, the varying pattern of concentration of resources was identified and tabulated. Qualitative facts were then brought in to see if they linked with these findings to help uncover the human aspect behind the way resources were concentrated in certain pockets).

7.2.3. Results of the data analysis:

1. The percentage deviation in the distribution of EAS resources examined through different parameters is presented for the different blocks of each research district.⁴³ Though the deviation analysis was undertaken in respect of all 11 parameters (Table 2.15), findings have been presented in respect of only eight (numbers 1 & 3 to 9), since in principle these have a greater potential to exhibit any correlations because of both their stronger conceptual linkage to EAS and their population being closer to the total population of the block. However, it needs to be highlighted that results with respect to all 11 parameters also are in line with those presented here on the basis of more important eight parameters, which can be seen in Appendix V where full details of the deviation analysis have been presented.

2. Thereafter, the research block panchayats were subjected to a similar analysis.⁴⁴ Additionally, in the consolidated presentation, groups of panchayats that fell into different levels of high percentage deviation (i.e., 500%-1000%; 250%-500%; and

⁴³As already noted, EAS data for Manasa block, Neemuch are for the years which are not comparable with those of other research districts in MP and Bihar. Hence, Neemuch is not included in the results even though its EAS data were also fully analysed. However, those have been provided in Appendix III.

⁴⁴The panchayat level analysis was done for all 1487 panchayats falling in all 21 blocks of the three research districts. However, in the paper, the results of two research blocks, namely Raipur (K) in Rewa district and Ghughri in Mandla district have been discussed (the third Manasa block in Neemuch district has not been discussed for the reasons already noted in the preceding footnote). The reason is that qualitative investigations were focussed in these blocks only, hence linkage of the quantitative and qualitative data was possible in these and not in the remaining 18 blocks.

100%-250%) are shown with the names of sarpanchs and panchayat secretaries and related information. This helps in the linking of the qualitative facts, where available, of their roles played in capturing the resources to add faces to the figure.

a. Results for Rewa District

Rewa: Block Level analysis: As already noted in Section 7.1, even when the actual distributional pattern of EAS resources across the blocks in Rewa district gives an impression of an asymmetric distribution (Table 2.16 and Graphs 2.15), it cannot conclusively establish this fact. Hence, the following eight Graphs 2.15A to 2.15H give further information on the parametric deviation analysis.

Table 2.16: Actual distribution of EAS Resources (1995-2000): All Blocks, Rewa District, MP

Blocks of Rewa District, MP	Periods for which amount distributed	Actual EAS Amount Distributed (In Rs. '000,00)
Gangev	1997-2000	325.94
Naigadhi	1995-2000	313.35
Rewa	1997-2000	293.04

Source: Analyse

Each graph shows that none of the parameters of possible correlation explain the actual distribution of EAS resources, as in each case the line denoting the percentage deviation is far from the *x* axis, or close to zero level of percentage deviation. They also reveal that some blocks, e.g., Gangev, always appears at the highest level of percentage deviation line, no matter which parameter is chosen for analysis. These findings are presented in a consolidated form in Table 2.17 below.

Table 2.17: Percentage of deviation in distribution of EAS funds for different parameters, Rewa District, MP

Sl. No.	Parameters	Gangev	Naigadhi	Rewa	Mauganj	Raipur (K)	Jawa	Sirmour	Tyonthar	Hanumana	% share in total population

Source: Analysed from the primary data from the field research.

The consolidated view of the findings helps to conclusively conclude that: (i) inter-block distribution of EAS resources in Rewa was skewed; (ii) Gangev block is the most privileged, having received on average about 45% more resources than it merited along any of the eight major parameters; (iii) the undue concentration of EAS funds in Gangev and a few other blocks clearly came at the cost of the interest of the people in the remaining four blocks, which had an average negative percentage deviation ranging from -37.8% to -11.1 %, ie., showing the extent to they received lesser funds than their parameter based claims. Just as Gangev was the most privileged, Hanumana appears comparably the most unduly deprived block.

Rewa: panchayat level analysis: Graphs 2.16, 2.17A and 2.17B present the inter-panchayat fund distribution in research block Raipur (K), Rewa graphically. Distribution of privileges and misfortune across the panchayats appear stark: roughly

78% of the total amount (Rs. 27.44 million) was colonised by just 21% of 99 panchayats. Additionally, each panchayat in this group was repeatedly the recipient of a number of schemes in different years, always amounting to more than Rs. 5 lakhs, and in Ukta-kanchnpur as much as Rs. 2.4 million (Graph 2.16). Consequently 56 of 99 panchayats in this block were entirely deprived of EAS resources.

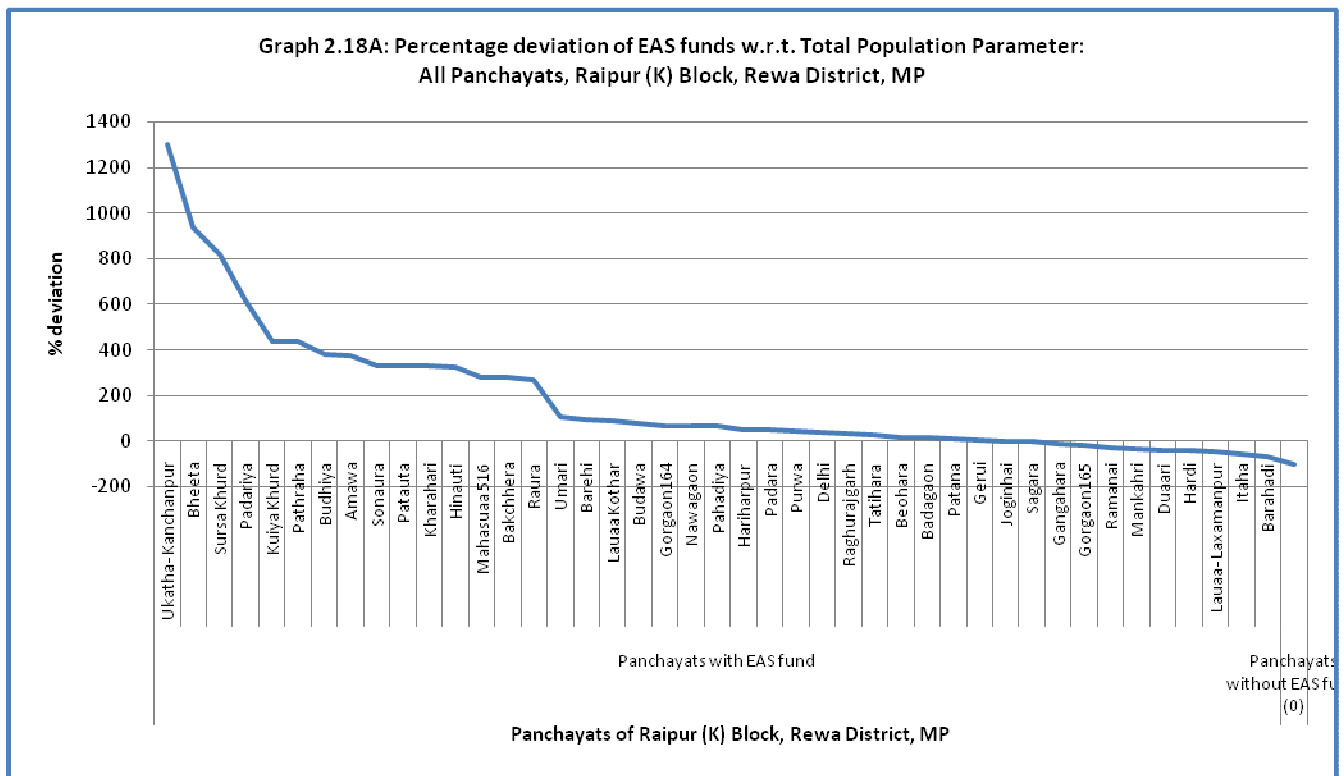

Source: Primary data from the field research.

Source: Primary data from the field research.

Nonetheless, the parametric analysis was performed to test these impressions. Its findings are presented in Graphs 2.18A to 2.18H:

Graphically presenting the percentage deviation analysis along eight parameters, all graphs unquestionably confirm that among those 43 panchayats who received some resources, some were far more privileged than others. The consolidated findings presented in Table 2.18 reveals five distinct groups:

(i) The first group comprises four panchayats that got on average at least six times the amount (500% and above deviation) than their due. Ukata-kanchanapur registered an average of 1200% of deviation. Had it received funds in accordance with the average effect of the eight important parameters, the total would have been no more than Rs. 1.9 lakhs as opposed to the Rs. 23.74 lakhs actually received. And even more striking is the fact that in three panchayats out of the four in this exceptionally privileged group, women were in the command as sarpanchs.

This may give an impression that female sarpanchs were exceptionally enterprising in securing large EAS funds. Thus, can be a great story for those who argue that women elected members do much better, thus more the reservation for them more effective

the PRIs. Unfortunately, this is far from reality. For, at least in Rewa the women members hardly functioned independently. Their husbands were *de facto* sarpanchs controlling the power and processes of panchayat completely and conclusively.

The studied panchayat Delhi was a typical case of this. Pramila Tiwari was the Sarpanch during the period of the the field work. Field investigations left no doubt to the fact that her husband, Udai Kumar Tiwari, a powerful Brahmin caste (the dominant caste in the locality) landlord, was not only the *de facto*, but was unimaginably the *de jure* sarpanch as well. In fact, his wife lived in the district headquarter town (35 kms. away from the village) to ensure good education for their children. Udai Tiwari, therefore, managed the business of panchayat in open: conducting meetings, signing proceedings, and even drawing money from the banks. *Nobody minded; even the government institutions like the Banks honoured the checks signed by him either faking her wife's signature, or even appending his own. For the entire world, as if, there was no dichotomy between the two faces!* As it was gathered over the field work, in Rewa this was not an exception but quite a common phenomenon in panchayats with women elected as sarpanchs from the reserved quota for them.

Table 2.18: Concentration of EAS funds in different Groups of Panchayats of Raipur (K) Block, Rewa District, MP

Panchayats of Rewa	Average % deviation of Main (8) Parameter	Actual EAS Amount	% of Amount against Block Total	Sarpanch (1994-95)
Ukatha- Kanchanpur	1199.40	23.74	8.65	Mrs. Ramsakhi (12th, General-Brahman)
Sursa Khurd	905.99	17.34	6.32	Mrs. Duasiya Adi. (12th, ST-Kol)
Padariya	831.07	20.22	7.37	Mrs. Parwati Nagar (Literate, SC-Nat)
Bheeta	791.79	15.50	5.65	Mr. Ramjugul (12th, SC-Saket)
Group 1: Very High % deviation (500% & more); 4 Panchayats	932.06	76.81	27.99	
Kuiya Khurd	437.07	9.63	3.51	Mr. Rajbahor Patel (8th, OBC-Patel)
Pathraha	414.45	10.60	3.86	Mr. Ramkhelawan Saket (12th, SC-Saket)
Budhiya	388.17	8.21	2.99	Mr. Rajesh Singh (10th, General-Chatriya)
Amawa	379.67	10.60	3.86	Munna Lal Patel (9th, OBC-Patel)
Sonaura	339.23	8.66	3.16	Motilal Patel (MA, OBC-Patel)

Patauta	308.44	8.56	3.12	Mr. Arjun Singh (5th, General-Chatriya)
Hinauti	308.11	11.34	4.13	Mrs. Gita Singh (BA, General-Chatriya)
Kharahari	305.34	9.61	3.50	Mrs. Munni (5th, OBC-Vishwakarma)
Bakchhera	253.31	8.56	3.12	Mr. Guru Prasad Tiwari (MA, General-Brahman)
Mahasuaa 516	251.83	8.56	3.12	Mr. Tejbhan Singh (PhD, General-Chatriya)
Raura	249.51	7.92	2.89	Mr. Harishankar Shukla (B.Sc., General-Brahman)
Umari	147.61	7.49	2.73	Mr. Gaya Prasad Agnihotri (11th, General-Brahman)
Barehi	103.62	5.05	1.84	Jagdish Prasad (8 th , OBC-Vishvakarma)
Group 2: High % deviation (100% to 500%); 13 Panchayats	298.95	114.82	41.85	
Group 3: Medium % deviation (0.01% to 100%); 16 Panchayats	37.60	56.27	20.51	
Group 4: Negative % deviation (-0.01% to -99.99%), 10 Panchayats	-34.11	26.49	9.65	
Group 5: No Amount (56 Panchayats)	-100.00	0.00	0.00	

Source: Analysed from the primary data from the field research.

(ii) 13 panchayats were found to have received on average 298.95% more funds, their deviations falling within a range of 100 to 500%.

(iii) 16 panchayats fall in a moderate zone of deviation, ranging from above 0 to 100%;

(iv) 10 panchayats took the brunt of uneven distribution registering negative percentage deviation of about -34%; and

(v) final group of 56 panchayats received nothing.

Could qualitative inputs enlighten us on the underlying factors and processes that scripted this highly uneven and unfair distribution of funds in Raipur (K) block? This account illustrates:

(a) How was an EAS project of Rs. 7.74 lakhs “constructed” for Hinauti panchayat?

Hinauti panchayat’s Rs. 1.13 million resulted in a percentage deviation of 308.11% which took it into the second most privileged group of panchayats (Table 2.18). Why did it get more than four times its due? It was not because the panchayat representatives, especially the sarpanch,

were the ideally imagined change agents who could mobilize the poor to demand maximum employment? In reality Mrs. Geeta Singh was the *de jure* sarpanch during 1994-99, but her husband Nagendra Singh was the *de facto* sarpanch. In an interview he revealed the following facts. He had initially prepared a stop dam project for Rs. 2.97 lakhs and sent it upwards to the district via block for approval (under the then prevalent rules, a panchayat was authorised to take up construction works of projects valued at Rs. 3 lakhs or less).

A senior Janpad (Block) panchayat representative opposed to Singh did not want the scheme to go to him. He coerced a junior engineer in the block to inflate the estimate to Rs.4.5 lakhs, thus bringing the execution under control of the block panchayat (blocks were authorised to execute works up to a value of Rs. 5 lakhs). When Singh became aware of this, he utilized his contacts with engineers at district level to get the estimate further inflated to Rs. 7.74 lakhs, thus requiring district level approval (for projects between Rs. 5 lakhs to Rs.1 million]. Singh said he was happy to lose control of the project as long as his rival did too.

The district awarded the project to the Water Resources Department which involved a contractor close to the then Member of Parliament of Rewa, Sunder Lal Tiwari, the son of the political “Big Boss” of Rewa, Srinivas Tiwari. However, Nagendra Singh was also powerful in his local area as the *de facto* sarpanch. Thus, when the contractor started work, Singh deliberately created serious obstacles in the hope that the contractor would then offer a bribe, which duly materialised to the tune of Rs. 50,000. Singh also disclosed that the actual cost of the construction was about Rs. 2.5 lakhs, he was paid Rs. 50,000 and the remaining Rs. 4.74 lakhs were pocketed by the contractor, engineers and officials of the district technical agency and, of course, the MP and his other henchmen.

(b) The other faces behind the EAS figures

Other knowledgeable respondents were also quick to point out the faces behind the figures. The family of Mrs Ramasakhi, sarpanch of Ukata-kanchanpur (the panchayat at the top of Group I (Table 2.18) had strong links with Mrs. Majulata Tiwari, who was the Chairman of Panchayat District (and thus in charge of approving projects). Mrs. Tiwari was also a strong political ally and protégé, of the “big boss” Srinivas Tiwari. Ramsakahi’s family were also well connected by caste and political loyalties to Tiwari, whose word was final in allocation decisions.⁴⁵

⁴⁵ The author attended the general body meeting of the District Panchayat held on 16 February, 2003 where the annual action plan (AAP) for projects under different programmes [such as the SGRY, the new name for the EAS] was taken up as an agenda item by the Chief Executive Officer (CEO) for deliberation. Despite being an agenda item, no member was provided with a copy (of the names of proposed schemes sub-region wise and the rationale for their inclusion in the AAP). The CEO read out a few project names inaudibly. Soon a few members remarked: “Why are you wasting time here? Just approve it but consider including schemes we are interested in.” One member remarked that for years he had been fighting to no avail that members’ views and preferences be properly considered while finalizing the list of projects. The CEO, stung by this criticism, replied sarcastically: “But your brother’s preferences have been duly

Even as Mrs Tiwari followed the diktats of Srinivas Tiwari in sanctioning EAS projects, she did not forget to extract her payoff. The tribal ex-sarpanch Babulal Kol of Tatiyara panchayat had proudly shown the one kilometre long approach road costing Rs. 2.99 lakhs constructed under the EAS in 1998-99. He also said that Mrs Tiwari had demanded Rs. 15,000, that he had paid in advance through her broker, a school teacher, as the required commission for obtaining the project approval.

Further deep interviews in this research region unequivocally confirmed that unless sarpanchs had favourable connection with the “big boss” of Rewa, paid hefty amounts as commissions to his brokers and also to influential district level PRI members and officials, it was impossible to get EAS projects sanctioned for their panchayats. But this also made the sarpanchs free to siphon off a considerable amount of EAS money, which resulted in incomplete and poorly executed projects. The labourers suffered the most, since this also adversely impacted on the employment generation potentials of the projects.⁴⁶

However, the fact, which shows a strong but also startling connection between qualitative and quantitative data, came from the interviews of a number of knowledgeable key respondents in Silpari panchayat. It was one among the 56 unfortunate panchayats which had not received any fund under EAS. A very active ex-sarpanch told that:

During the times of EAS, MLAs and MPs used to be mostly from forward castes *Brahman* and *Rajput*. Sarpanchs who could reach to connect to them and could pay a hefty sum as commissions to them used to succeed in getting EAS projects, otherwise not.⁴⁷

This was additionally confirmed by another insider, Shatrudhan Patel, the panchayat secretary who was continuing on this post since Lakshman Patel’s time.⁴⁸ By implication they also suggested that since Silpari panchayat was dominated by backward castes, this also worked against it since the forward castes MLAs and MPs dictated the flow of EAS resources from the district level. This prompted us to find out whether backward castes, especially Patel among them who are relatively more independent, dominated panchayats were generally excluded or not. The findings, indeed, were amazing: 27 out of 56 panchayats, which did not get any EAS fund, were headed by Patel caste sarpanchs. 16 out of 27 of them, or about 60%, fell into this most unfortunate group, whereas forward castes sarpanchs were comparatively the least excluded (43%).

accommodated.” Later, it was discovered that his brother was a prominent Congress leader and close to the “big boss” (*Field Notes, 16 February, 2003*).

⁴⁶Based on the interviews of Subhash Pandey, BJP leader, Delhi, Rewa, 04.10.09, Sheshmani Patel, BJP leader, Kanti, Rewa, 05.10.09, Ram Sajivan Saket, ex-Janpad (block) member (2000-05), Delhi, Rewa, 06.10.09, and Ram Shiromani Kol, ex-Panch (Ward-14, 2000-05), Delhi, Rewa, 07.10.09.

⁴⁷Interview, Lakshman Prasad, ex-sarpanch (1995-2000), Silpari, Rewa, 11.10.09.

⁴⁸Interview, Shatrudhan Patel, panchayat secretary, Silpari, Rewa, 11.10.09.

In short, enough evidence from the field inquiry confirmed the findings of the deviation analysis, that there was no conceivable connection between the high deviation and the parameters. In other words, the high concentration of EAS funds in certain panchayats was not the result of either elected representative or poor population making demands, but largely driven by factors such as: the power of higher level politicians pushing resources down into their preferred areas, and the machinations and networking of individual sarpanchs.

Among the former, Srinivas Tiwari was the key player. This was confirmed not only by interviews with politicians, PRI representatives, officers and common people alike (see Section 4), but also the distribution pattern of NREGS resources currently in operation throughout the country.

During the EAS period, the most privileged block in Rewa was Gangev. The deviation analysis conclusively established that whatever the parameter employed to ascertain why Gangev received the maximum Rs. 325.94 lakhs, it always disclosed a higher side deviation of about 44% (Table 2.17).

Year	Voters In 1000	Voter Turnout (% age)	Winner			Runner-up		
			Candidate Name	%age	Party	Candidate Name	%age	Party
2003	108.76	69.26	Girish Gautam	51.28	BJP	Shriniwas Tiwari	26.51	INC
1998	98.29	60.33	Srinivas Tiwari	39.29	INC	Girish Gautam	38.99	CPI
1993	86.68	60.11	Srinivas Tiwari	27.18	INC	Ram Sushil Patel	25.25	BSP
1990	79.1	59.76	Sri Niwas Tiwari	34.31	INC	Kaushal Prasad Mishra	31.64	BJP

1980	49.61	53.13	Champa Devi	27.78	INC(I)	Kaushal Prasad	20.77	JNP(SR)
1977	49.9	58.03	Lal Rukmani Raman Pratap Singh	46.84	INC	Kaushal Prasad Mishra	37.98	JNP

Source: Election Commission of India.

Table 2.19 shows that none other than Srinivas Tiwari represented Gangev as MLA for two terms (1993-1998; 1998-2003), the main period of EAS. In the 2003 elections he was defeated and replaced by a BJP MLA. NREGS started in late 2005, practically from the year 2006. A comparative view of distribution of funds of EAS during 1996-2000 and of NREGS during 2007-2009 is presented in Graph 2.19 below. It tells the story of the reversal of power bases in unequivocal terms. No longer represented by Srinivas Tiwari, Gangev received 97% of the average NREGS amount per block.

A further deviation analysis (not shown here) reveals that with total population as the parameter, Gangev reports -4% deviation compared to +44% in the EAS during Tiwari's period. Jawa block, in Sirmaur legislative constituency, had received only 76% of the average EAS amount, but under NREGS has shown a significant increase to 107% of the average.

Source: Compiled from the primary data from the field research.

In light of these facts, it can now be postulated that ultimately what mattered were: (a) political affiliations, clientelistic politics, cuts and commissions (normally routine, but sometimes an independent and decisive factor) to politicians and officers who mattered; and (b) individual sarpanch's ability to forge upwards links through prior political connections.

Networking by the micro-level actors (*sarpanch*) with those at block and district level, the senior PRI representatives, MLAs, Ministers, and political "bosses", structured a bottom-up pull on EAS resources in this region. The latter set of actors also linked with their clients: their henchmen, political supporters, contractors, but mostly the *sarpanchs* to structure a top-down trajectory of the resource flow under EAS. Deviation analysis helps to map these connections.

The story of EAS in Rewa appears no different from Vashaili in Bihar. Although mapping of distribution of resources in Bihar was not done as comprehensively as in MP nor detailed deviation analysis conducted, nonetheless, even the most preliminary picture of fund distribution in Bidupur (Graphs 2.20 and 2.21) presents a significantly comparable story. Of 24 panchayats in Bidupur, 6 were entirely excluded. This may appear negligible against the exclusion of 56 out of 99 panchayats in Raipur (K) in Rewa. However, as already noted, panchayats in Bihar are about six times larger than in Rewa, thus a truly comparative view would read as 73.33% villages excluded in Bidupur against 57% in Raipur (K). The capture of 74.09% of EAS funds by just 10% villages in Bidupur, and 79% funds concentrating in 21.21% of Raipur (K)'s panchayats (Graphs 2.17A & 2.17B) show Vaishali and Rewa to be almost mirror images.

Source: Primary data from the field research.

The similarity is even more striking given the differences between the two. The field work in Bihar unambiguously showed that the local “big boss”, Bidupur’s MLA Bhola Babu, protégée of Lalu Yadav, controlled access to all EAS funds. The same story of cuts and commission, though paid by the contractors and his other henchmen, abounded in the fields of Bihar explaining why EAS funds were pushed more or less in certain panchayats. Bhola Babu was a diehard backward caste politician, a fanatic supporter of LaluYadav and a fighter against elite caste dominance in society and politics. Srinivas Tiwari was in many respects the polar opposite: a classic dominating and feudal elite, and lifelong supporter of the Congress party that in MP is dominated by the forward

castes. None of these differences mattered, however, when it came to extending their overall political and social power in order to control distribution of EAS resources. *Even 1500 to 1600 elected representatives from all the three tiers of the PRIs in Rewa district as a whole did not matter before Sriniwas Tiwari, the absence of which was thought to have perversely permitted the MLAs, such as the Bhola Babu, to command EAS in Bihar.* On the contrary, they seemed to have partnered with Tiwari mostly for gaining their perverse payoff from it, though sometimes under the weight of his power too. In the process, the institutional logics of the local governance structures, even if fundamentally different from each other in the two states, still seem to have mattered very little.

b. Results for Mandla District

Mandla; Block Level analysis: The consolidated view of the findings on EAS distribution in the tribal Mandla district is quite different from Rewa's and demonstrates the value of the quantitative analysis and its methodology applied here. Preliminary Table 2.20 and Graph 2.22 suggest that Mandla block garnered the highest amount (Rs. 428 lakhs), followed by Nainpur and Bichiya (Rs. 378 and Rs. 317 lakhs respectively). Initially during fieldwork, this pattern appeared consistent with the political economy realities. Mandla was represented by Devendra Tekam, an important cabinet Minister in Digvijay Singh's government at that time. Nainpur seemed privileged because the Chairman of the District panchayat, Dinalal Taram, came from this block. He had also represented the area as its MLA during the earlier 1993-1998 assembly term.

Table 2.20: Actual distribution of EAS Resources (1993-1999): All Blocks, Mandla District, MP

Blocks of Mandla District, MP	Actual EAS Amount Distributed (In Rs. '000,00)
Mandla	428.00
Nainpur	377.71
Bichhiya	316.90
Niwas	245.14
Bijadandi	242.56
Ghughri	228.84
Mohgaon	228.31
Narayanganj	185.95

This changed dramatically when the data were subjected to parametric quantitative analysis. The results (Table 2.21, See also Graphs 2.23A to 2.23H) show Mandla and Nainpur occupied 5th and 4th positions respectively, with about 10% positive deviation. Niwas and Bijadandi blocks were at the top with about 30% and 20% deviation, even though their politicians were hardly mentioned during the fieldwork in terms of wielding any special clout to have been able to have pushed more resources in their areas. If a serving cabinet minister and an erstwhile MLA and the serving chairmen of Mandla district panchayat could not obtain more resources in their respective areas of influence, then surely EAS appeared to have worked differently here than in Rewa.

So what were the factors that eventually mattered in shaping the distributional pattern? This will be taken up for discussion after also looking into the inter-panchayat distributional pattern in the studied block Gughri.

Mandla: the panchayat level analysis: Graphs 2.24, 2.25A and 2.25B again simply present the inter-panchayat fund distribution in the research block Ghughri block of the Mandla district graphically. However, the real picture arises from the parametric analysis of inter-panchayat distributional pattern presented in Graphs 2.26A to 2.26H and especially the consolidated Table 2.22. Their important findings are highlighted below:

(i) Unlike Raipur (K), the inter-panchayat distribution is much less skewed in Ghughri. Only 14⁴⁹ or about 32% panchayats remained untouched by the EAS funds against 73% in Raipur (K). However, Ghughri's smaller panchayat base of 44 and availability of funds for seven years, in comparison to Raipur (K)'s 99 and receipt of funds for only five years may suggest that even the exclusion of 14 panchayats in Ghughri may not be fully justified.

(ii) Even when inter-block distribution is not very skewed, inter-panchayat distribution among the remaining 30 panchayats appears uneven in a not insignificant manner. Six panchayats show a deviation in the range of 100% to 500% against the eight parameters of analysis. The average deviation of this group is 254.92%. Nevertheless, the asymmetry here is lower than Raipur (K)'s, where three times more panchayats were in this group (12) and the average deviation was also higher (315.23%). Further, whereas the very high group 1 is non-existent in Ghughri, four panchayats in Raipur (K) fall in this group with deviations averaging as high as 1000% and more (Table 2.18), which combined with the former conclusively reveal that Ghughri's unevenness is not extreme.

(iii) This lesser asymmetry seems more on account of geography than power. Four of the six panchayats in the top list of high deviation are situated quite close to the block office: Gajraj, Ghughri (the headquarter block itself), Salwah and Naharbeli. A number of panchayats in the group of 14 with negative deviation, for example,

⁴⁹The number could be possibly 11 as three projects in Ghughri's database could not be traced to its panchayats. Similarly two projects' panchayats in Raipur (K) block in Rewa remained unidentified, thus the number of panchayats with no funds might be 54 rather than 56.

Devhara, Duladar, Neijhar, Chalni and Baniya, are situated far away from the block office in eastern and southern extremes. Ghughri, like other tribal blocks in MP, is geographically highly dispersed with difficult hilly terrain. Buses do not connect to all its areas. Even the research panchayat, Ramhepur, has no bus route despite being only 15 kilometres from the block office. Unlike JRY funds that reached every panchayat's account (WP 1), EAS funds came via the district and block (Janpad) panchayat offices played an important intervening role. As such, sarpanchs were required to be in continuous touch with the block office about their proposals; understandably, therefore, sarpanchs of distant panchayats were disadvantaged in this process.

Does this mean that the political manoeuvrings and cuts and commission - almost omnipresent in Rewa - had only a negligible impact in shaping the fund distribution in this block?

The answer is yes and no, but more yes than no. Fieldwork gave the impression that even the tribal politicians were indulging in the practice of claiming commissions for approving projects. Credible stories of corruption were though difficult to obtain. People here did not open up easily on such matters, unlike Rewa where not only were such discussions widespread, but even those involved in the corruption did not hesitate to share the details once assured of confidentiality. Perhaps the culture of avoidance of *social shame*, still not lost in predominantly tribal societies, did not allow it here.

Nevertheless, surprising revelations were made by the *panchayat* secretary of Ramhepur in this regard. When a suggestion was made (in light of the findings from Rewa) that the JRY funds, *inter alia*, were being used as investment funds, i.e., for paying commissions to officials and higher level politicians to obtaining approval of EAS and other bigger projects, he strongly resisted and said that no such practice was prevalent in Ramhepur nor in other tribal areas. When further pressed, he finally admitted that though commissions had to be paid at higher levels, money for those were borrowed from money lenders. Another ex-panchayat secretary confirmed this

version.⁵⁰ Interestingly ex-sarpanch of Dongarmandla panchayat commented that since he was in the police before becoming sarpanch, he could avoid paying commissions, nonetheless, other sarpanchs had to pay about 20%-25% of the project cost.⁵¹ A highly knowledgeable school teacher even revealed that “a channel of sarpanchs exists in this region through which commissions are passed on to top level for getting projects.”⁵² Even the then district chairman Dinalal Taram conceded in a interview that since a sarpanch’s election cost between Rs. 10,000 - 20,000 and district members’ between Rs. 50,000 to Rs. 75,000 (1990s prices), these need to be recouped.⁵³

This said, the overall picture was that, though gradually increasing, the practice of cuts and commission was not, first, rampant, and second, was possibly for side benefits. If the funds were to be broadly distributed according to population share, the norm by and large prevailed over the greed factor. Additionally, if they wanted to, the district officials, especially the district magistrates and the chief executive officers of district panchayats, could intervene to oversee the distributional pattern of funds being shaped by the politicians and the PRI representatives with greater ease and effectiveness in tribal areas. This was enormously difficult in districts such as Rewa, where politicians were more ruthlessly aggressive in commanding the development funds than the tribal politicians.

Particularly in research district Mandla it was credibly gathered that well meaning Collectors and CEOs, posted during the years of the EAS, worked hard to collect data on how panchayats were covered by the EAS resources, identified neglected panchayats, and insisted that they were prioritised in the next round of allotments.

⁵⁰Interview, Basant Maravi, ex-panchayat secretary, Ramhepur, Mandla, 03.10.09.

⁵¹Interview, Patiram Dhurve, ex-sarpanch (1994-99), Dongarmandla, Mandla, 13.10.09.

⁵²Interview, Nandlal Parte, Teacher, Dongarmandla, Mandla, 14.10.09.

⁵³The district chairmen, vice chairmen of block panchayats, and the district panchayat, all tribal, were found to have employed non-tribal staff from the district offices as their personal assistants,. Non-tribal staff were preferred because of their ‘experience and expertise’ in helping their bosses make money without getting implicated in files and papers. When Taram was asked to confirm this, he was not brazen enough to confirm it, eventually suggesting that the reason non-tribal staff were preferred was because they were well versed in showing appropriate courtesy to important visiting people and it was felt that tribal staff with their ‘rustic simplicity’ might inadvertently give offence. The cover up, though, was palpable.

These results from the tribal region of Madhya Pradesh have a significant parallel in the EAS dynamics in the tribal Murhu block of erstwhile Bihar. The inter-panchayat distribution of funds in Murhu shows that all 24 panchayats were covered by EAS funds in contrast to events in Bidupur. However, in terms of coverage of villages, Murhu failed to reach 44% of its 138 villages as did Ghughri with 31% of its panchayats. Skewed distribution was observed in Murhu; about 17% of its villages shared 63% of total invested funds (Graphs 2.27 and 2.28). The level of distortion was not as bad as in Bidupur for, as in Mandla, the district level officials in command in lieu of the absent PRIs were better able to contribute constructive input, perhaps due to the responsive, or at least less aggressive, tribal politicians.

Source: Primary data from the field research.

8. Concluding Remarks

The comparative view of EAS in MP and Bihar is illuminating but also deeply puzzling. EAS on the ground worked with a remarkable, though, depressing, similarity, since villagers remained equally unaware, uninvolved and powerless in exercising their rights in both states. Demand-driven EAS silently but decisively reconfigured into a supply-led programme in both states. Competitive pressures between the players involved in drawing down the EAS resources in their areas were neither driven by a passion for helping the poor maximize employment gains, nor were for building up productive and durable infrastructures with long-term economic dividends for the powerful landed classes, or for both since these were entirely a positive-sum and not a zero-sum operation. Instead, the pressures were fuelled by perverse incentives, both from bottom up and top down, building political networks and increasing personal wealth with remarkable parallels in regional variations in their intensity and outcomes in MP and Bihar. These happened despite the absence of PRIs in Bihar and their full presence in MP, leading to the question as to who masqueraded as whom as masked actors in the fields: the bureaucrats masked as *mukhiyas* masquerading as the PRIs representatives in Bihar? Or the sarpanchs and district panchayat representatives masked as bureaucrats

masquerading as Collectors and BDOs in MP? WP 5 unravels these puzzles in some depth.

The next working paper 3 turns to another rights-based programme, the Education Guarantee Scheme (EGS) in the education sector. It was a pioneering programme that earned Madhya Pradesh national and international accolades, of which its protagonist used to say: “Where there is will (of the poor), there is an EGS School”. WP 3 will relate whether or not the poor succeeded in translating the vision of the rights-based programme under the EGS, and thus could (or not) shape the dynamics of the EGS in the interests of their children’s education?

* (i) During this period (94-98), Dindori was included in Mandla district. Hence it had 16 blocks during this period and funds shown here were invested for under EAS from Mandla to all its 16 blocks. After formation of Dindori as a separate district in 2000-01, Mandla is left with 9 blocks.

(ii) Neemuch was within Mandsaur district till 1999-2000. Undivided Mandsaur had 8 blocks including 3 blocks of Neemuch districts. During this period (94-98), EAS funds shown here thus were invested by Mandsaur district to blocks of Neemuch. After formation of Neemuch as a separate district in 2000-01, Neemuch operated independently with its 3 blocks.

Notes: (1) * See notes. (i) & (ii) on the first page of this Appendix. (2) **Amounts shown here have been also presented in the chart 4.5 in the text for the concerned research districts Rewa, Mandla and Neemuch. (3) Districts shown at Sl. No. 39 to 45 were transferred to the Chhatisgarh State that was newly carved out from Madhya Pradesh in the year 2000. (4) District shown at Sl. No. 46 to 52 are in Madhya Pradesh, but were created as independent districts for the first time in the year 2000. Prior to that they were part of bigger districts in Madhya Pradesh.

Notes 1: In two panchayats, marked *, namely, Gaura (sl. no. 30) and Kati (sl. no. 48), for a few parameters the percentage deviation show error value (#DIV/0!) because population for those parameters are zero. However, this does not affect the analysis because both these panchayats have no EAS amount, hence, neglecting these error values these panchayats have been taken under group 5 for -100% deviation.

2: In Duaari (sl. no. 27; also marked **) panchayat since the population of the parameter "labour force" being close to zero, It has been treated irrelevant and excluded from percentage deviation analysis. Hence, only for this panchayat the overall average is based on percentage deviation analysis of 7 (important) and 10 instead of usual 8 (important) and 11 parameters.

**B.: Summary of Percentage Deviation Analysis for Raipur (K) Block, Rewa, MP
(Also see Table 2.18 in the text which is based on this)**

Groups of Panchayat	Panchayats of Raipur (K)	Sl.No. in detail appendix	Overall average of % deviation w.r.t. 8 important parameters	Overall average of % deviation w.r.t. all 11 parameters
Group 1: Very High % deviation (500% & more)	Ukatha- Kanchanpur	95	1199.40	1318.10
	Sursa Khurd	90	905.99	897.06

Notes 1: In Baniya (sl. no. 3); Kisli (sl. no. 27); Pandukala (sl. no. 34); and Kusmi (sl. no. 29) panchayats, since the population of the parameter "migration" in the first three and "labour force" in the last panchayat are respectively close to zero or very low, those have been treated irrelevant and excluded from the percentage deviation analysis. Hence, for these four panchayats the overall average is based on percentage deviation analysis of 7 (important) and 10 instead of usual 8 (important) and 11 parameters.

D.: Summary of Percentage Deviation Analysis for Ghughri Block, Mandla, MP
(Also see Table 2.22 in the text which is based on this)

Groups of Panchayat	Panchayats of Ghughri	Sl.No. in detail appendix	Overall average of % deviation w.r.t. important 8 parameters	Overall average of % deviation w.r.t. all 11 parameters
Group 1: Very High (500% & more)	Nil	-	-	-
Group 2: High % deviation (100% to 500%)	Gajraj	18	429.80	416.85
